## 1 Serial Data Transmission

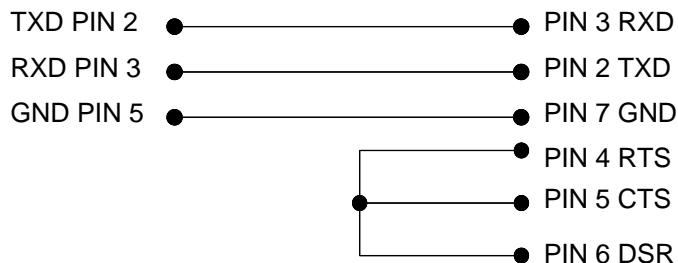

### 1.1 Connector Assignment (9-pin DSUB Socket)

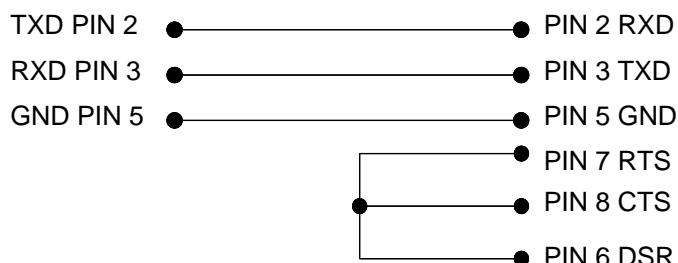

Pin	Signal	Description
2	T x D	Transmitting data line
3	R x D	Receiving data line
5	GND	GND signal
7	CTS	HW Handshake
8	RTS	HW Handshake

## 1.2 Connection Plan RS232

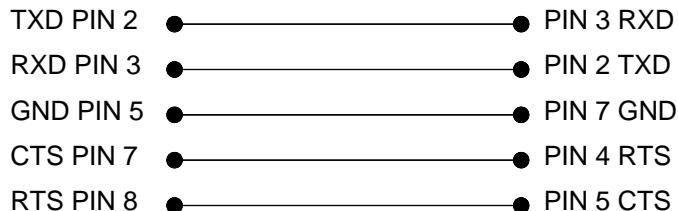

**Software Handshake** Print module (DSUB 9 plug) PC (DSUB 25 socket)

Print module (DSUB 9 plug) PC (DSUB 9 socket)

**Hardware Handshake** Print module (DSUB 9 plug) PC (DSUB 25 socket)

Print module (DSUB 9 plug) PC (DSUB 9 socket)

## 2 Parallel Data Transmission

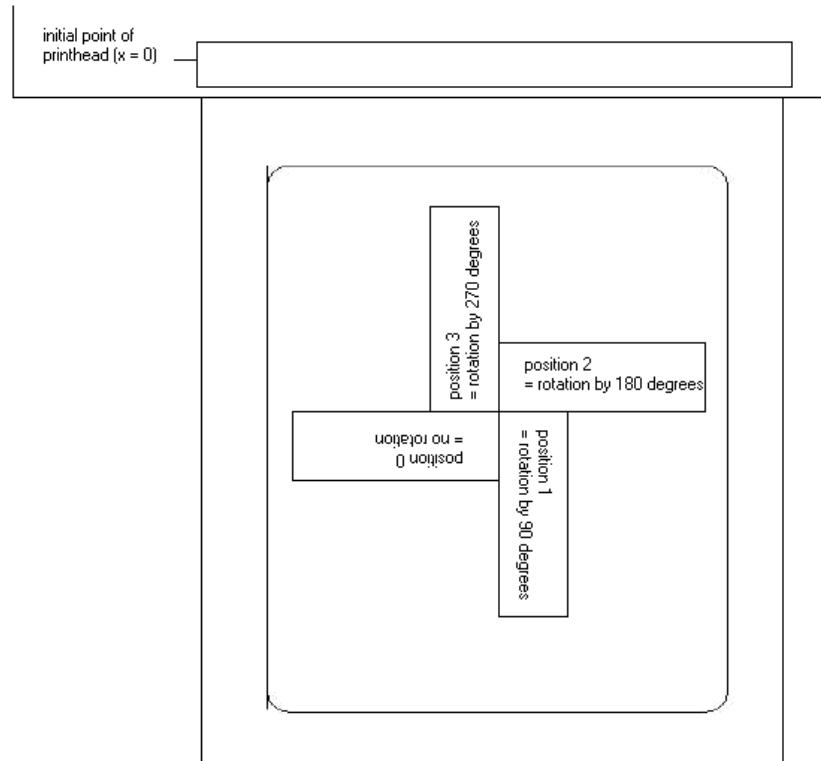

### 2.1 Connection Plan

Signal Pin no.	Signal name	Direction	Function
1	STROBE	(Input)	The <b>STROBE</b> signal indicates that data can be received. The impulse width to the receiving line has to be 0,5 µs at least.
2	DATA 0	(Input)	
3	DATA 1	(Input)	
4	DATA 2	(Input)	
5	DATA 3	(Input)	
6	DATA 4	(Input)	
7	DATA 5	(Input)	
8	DATA 6	(Input)	
9	DATA 7	(Input)	
10	ACK/	(Output)	An impulse of approx. 12 µs confirms data input for a LOW level and signalises the further listening watch of the print module.
11	BUSY	(Output)	A HIGH level indicates that the print module cannot receive any data. On the following conditions the signal HIGH is possible: 1) for data input (impulse for each sign) 2) during a printing process 3) in Offline status 4) for print module failures
12	PE	(Output)	A HIGH level indicates that paper is used up.
13	SELECT	(Output)	High Online
14	AUTOFEED		
15	FAULT/	(Output)	Signal goes to LOW, in case 1) the paper is used up 2) the print module is Offline or 3) an error occurs.
16	INIT/	(Input)	A LOW level initializes the print module
17	SELECTIN/	(Input)	A LOW level informs the print module to be addressed
18-25	GND		

### 3 Text, Bar Code, Graphic

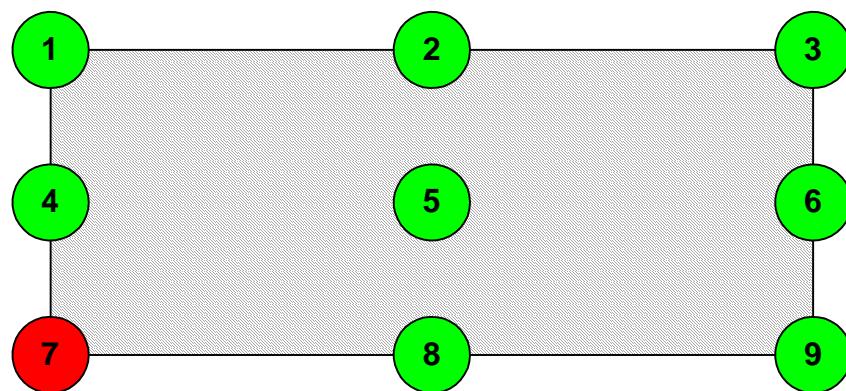

#### 3.1 Definition of Rotation

#### 3.2 Definition of Datum Point

The so-called datum point is the relation point for indication of position. In the meantime the datum point is also the point at which the selected object is rotated.

To determine the datum point in the mask sets, the possible datum points are numbered from left top (1) to right bottom (9). The default datum point is left bottom (7). This datum point is also used even if no indication is found in the mask set.

## 4 Data Format

The data format consists of four parties:

- Mask set
- Text
- Graphic
- Command

For a n-line label the following has to be transmitted:

- n - mask sets
- n - text sets
- n - graphic sets (if necessary)
- 1 - command set

### NOTICE!

The command set always has to be transmitted at the end!

To each text on a label belong one MASK SET and one TEXT SET with the same field number.

To each code on a label belong one MASK SET, one TEXT SET and one CODE SET with the same field number.

To each box or line on a label belongs only one MASK SET.

To each graphic on a label belong several GRAPHIC SETS according to its size res. height, e.g. a graphic with a height of 10 mm needs 80 graphic sets.

### Examples

Label with 3 lines of text:	3 mask sets 3 text sets 1 command set
Label with 2 lines of text, 1 box and 3 lines	6 mask sets 2 text sets 1 command set

For ALL data sets the following is valid:

Each set starts with  
SOH = start of header → HEX format 01

Each set ends with  
ETB = end of data transmission block → HEX-Format 17

Alternatively, the start character SOH can be set to 5E<sub>Hex</sub>, the end character ETB to 5F<sub>Hex</sub>. This is necessary if the connected system (e.g. UNIX) cannot transfer control signs.

All other data sets → ASCII format, but they will be transmitted as hexadecimal characters.

### Example

A = identification of mask set - transmission: 41<sub>HEX</sub>

n = field number '01' - transmission: 30<sub>HEX</sub>, 31<sub>HEX</sub>

## 4.1 Explication

- x coordinate:** Distance from right label rim in mm  
Measured from the right label rim up to the lower left point of the corresponding line
- y coordinate:** Distance from upper label rim in mm  
Measured from the beginning of the label down to the lower left point of the corresponding line

<b>Bitmap fonts (not proportional)</b>	01 = Font 01	0,8 x 1,1 mm	127 characters
	02 = Font 02	1,2 x 1,7 mm	255 characters
	03 = Font 03	1,8 x 2,6 mm	255 characters
	04 = Font 04	4,0 x 5,6 mm	127 characters
	05 = Font 05	1,8 x 3,2 mm (descender)	255 characters
	06 = Font 06	1,5 x 2,9 mm	127 characters
	07 = Font 07	1,2 x 2,2 mm (descender)	255 characters

<b>Bitmap fonts (proportional)</b>	21 = Font 21	(1,0; 13)	255 characters
	22 = Font 22	(1,8; 21)	255 characters
	23 = Font 23	(2,6; 31)	255 characters
	24 = Font 24	(5,6; 67)	255 characters
	28 = Font 28	(4,0; 48)	255 characters
	29 = Font 29	(0,8; 9)	255 characters

### NOTICE!

In order to reach best print results it is recommended always to choose the biggest possible font.

**Vector fonts  
(proportional)** When in mode 'proportional text', the height and width of text have to be entered in mm.  
These values refer to the capital 'M', i.e. the values of other characters are changing in proportion.

**Vector fonts  
(autoscale)** When in autoscale mode, height and width of text has to be entered in mm.  
The height of the text refers to all capital letters. When using small characters and descenders the height is changing in proportion. When entering the width, the complete file has to be considered. The text will be adjusted automatically, which means that the width of the characters is changing.

## 4.2 Definition of Field Attributes/Field Properties (optional)

### Explanation

Additionally, to mask set 'AM[ ] ...' the possibility was created to define further field properties. In order to achieve a high flexibility, the field properties received own names/identifications. Therefore, the sequence as well as the number of field properties is free. If necessary, the mask set 'AC[ ]' is transferred additionally to mask set 'AM[ ]' to the print module.

### Structure mask set

(SOH)AC[ ]at1=*value*;at2= *value*;... (ETB)

Attribute (at):	Description
BT	<b>ITF 14 (see page 22)</b> bearer bar type
BW	bearer bar width
QZ	quiet zone in 1/100 mm
NAME	<b>Field name (see page 14)</b> definition of field name
FN	<b>Field number (see page 18)</b> Free definable field number

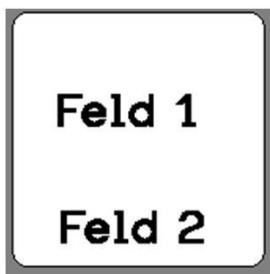

This table is constantly extended. The current version is available on demand.

### 4.3 Field Name

#### Application (customized)

When printing systems are connected to a computer system or machine controls, there is often the requirement that variable data is to be inserted into an existing layout. This data contents come from the superordinate computer system (database) or a machine control (e.g. PLC, scale, ERP system, etc.). Basically, it was always possible to integrate variable data into a 'loaded' layout (mask). The access to certain fields has been effected via the field index, i.e. a consecutive number. This field index is generated by Labelstar Office and can also change with layout changes, whereby the data allocation to the computer system/control is no longer correct.

#### Example

#### Print data

```
...
// TEXT (1/100 mm)
(SOH)AM[1]2405;803;0;1;2;4;1;1;0(ETB)
(SOH)BM[1]Feld 1(ETB)
// TEXT (1/100 mm)
(SOH)AM[2]421;856;0;1;2;4;1;1;0(ETB)
(SOH)BM[2]Feld 2(ETB)
// LINES: 2
...
```

The print data contains the definitions for the two text fields. The field index is always in '[ ]' of the mask or text setting.

If the text field 'Feld 1' is deleted on the label and then recreated, it gets a new index. In this case '2'. The text field 'Feld 2' gets the index '1'. As a result, an assignment via the field index is used only to a limited extend, without manual post-processing of the layout data.

**Explanation**

As an alternative to the field index, the assignment can also be made via the field name. A change in the field index has no longer any influence, and a changed layout is still filled in the right places with variable data of the computer system/control system.

Labelstar Office: The print data is supplemented by the following line:

(SOH)AC[1]NAME="**Field name**"(ETB)

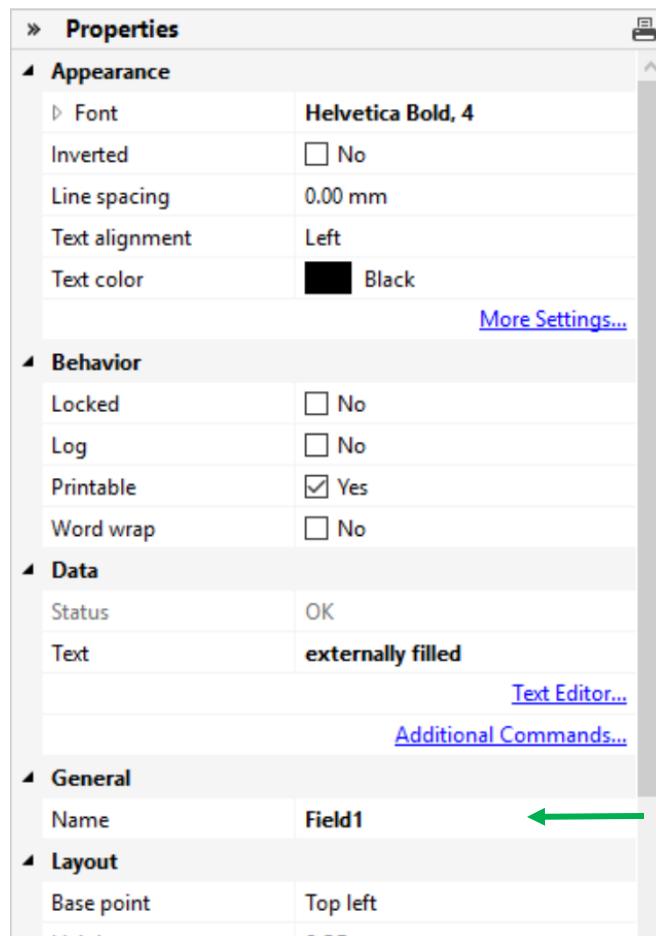

The field content defined via the text block can be changed by the computer system/control with the following command:

(SOH)BV[**Field name**]Feld 2(ETB)

This results in the following standard procedure for the connection to a high-level control and/or computer system.

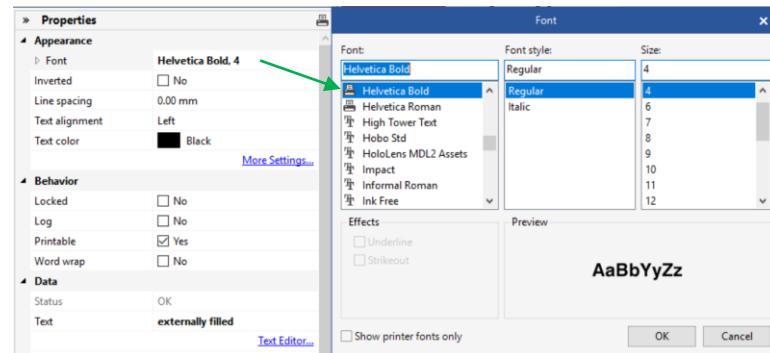

**Label design with Labelstar Office**

The field names are automatically transferred by Labelstar Office.

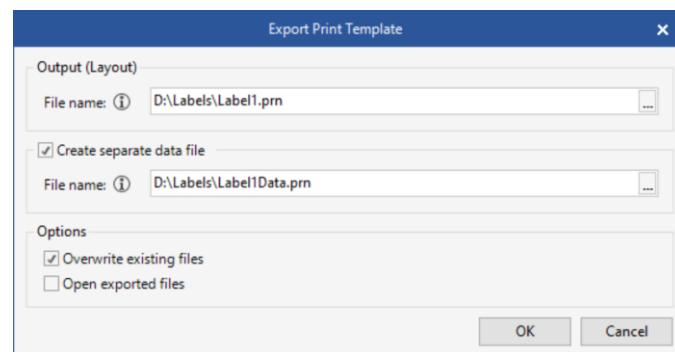

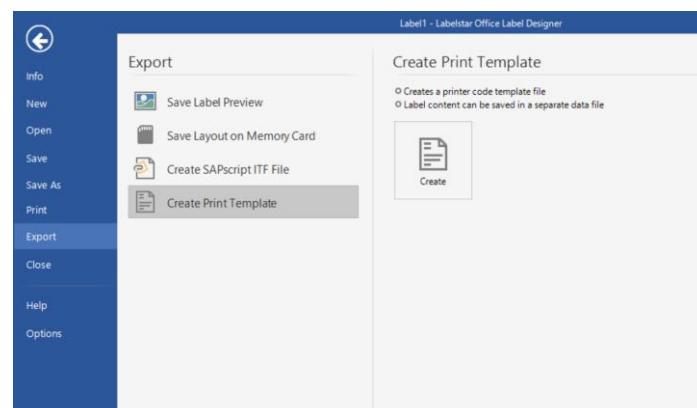

The desired field name (Field1) is entered in the properties of the text field.

For text fields, a printer-internal font must be used. The printer-internal fonts are marked by a printer symbol in the list.

### Export to a print file and save the layout in the external controller

When the label design is finished, the label is exported to a print file. For this, Labelstar Office uses the function **File – Export – Create Print Template**.

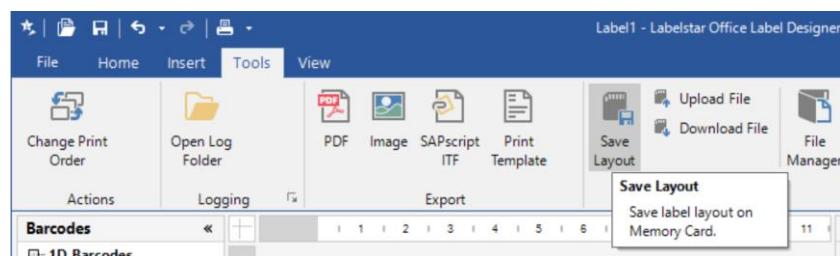

The option **Create separate data file** must be selected, otherwise the line (SOH)**FBC---r-----(ETB)** is included in the print file, which would immediately release a print procedure.

By starting a print procedure, this print file (layout definition / mask definition) is transferred from the controller/computer system to the printing system first.

### Save the layout on the memory card of the printer

As an alternative to 'Export to a print file' the label layout is saved on the memory card of the printing system. For this, the memory card tool from Labelstar Office can be used.

The layout must be called by the controller/computer system **before** filling the variable fields.

The following parameter set is used:

(SOH)**FMA---rfilename(ETB)**

The path name is determined when saving and possibly contains a path.

Example: "A:\Standard\eti1".

### Filling the variable fields by the controller/computer system

The higher-level control can select the variable fields by the field names and set the contents. Subsequently, the print job is restarted.

<b>Example</b>	(SOH) <b>FMB---rfilename</b> (ETB)	Loading the layout from mc
	(SOH) <b>BV[ArtBez]screws</b> (ETB)	Filling the field "ArtBez" with "screws"
	(SOH) <b>BV[ArtNr]123456789</b> (ETB)	Filling the field "ArtNr" with "123456789"
	(SOH) <b>FBC---r-----</b> (ETB)	Start printing

### 4.4 Field Selection by Free Definable Field Number

With the following described attribute it is possible to assign a free definable field number to a field. This field number does not have to be clear, i.e. several fields can have the same field number. In this way the same field contents can be assigned to different fields.

The following attribute identification is defined:

Attribute: **FN**

Description: free definable field number

After the field number was assigned with AC mask statement,

(SOH) **AC [n] FN=nr** (ETB)

n = field index

nr = free definable field number

it is possible to access to the field and/or the fields with the new BF text statement:

(SOH) **BF [nr] text** (ETB)

nr = field number

text = field contents

#### Example

```
// Assignment of field number field 1 and field 2
(SOH)AM[1]1000;2500;0;4;2;7;400;400;0(ETB)
(SOH)AC[1]FN=100(ETB)
(SOH)AM[2]2000;2500;0;30;2;4000;9;3;0;1(ETB)
(SOH)AC[2]FN=100(ETB)

// Access to field 1 and field 2 by field number
(SOH)BF[100]1234567890(ETB)
```

## 5 Mask Set

### 5.1 Text

<b>AM[n]y;x;p;a;d;z;dy;dx;lp;dp</b>		
A	identification for mask set

pz	check digit calculation 0 = no check digit calculation 1 = check digit calculation 4 = inverse - no check digit calculation 5 = inverse - check digit calculation
z	human readable line 0 = no human readable line 1 = with human readable line
dp	datum point 1 = left top                            2 = centre top                            3 = right top 4 = left centre                            5 = centre centre                            6 = right centre 7 = left bottom (default)                    8 = centre bottom                            9 = right centre

### 5.3 ITF Bar Code

<b>AM[n]y;x;p;a;d;h;v1;v2;pz;z;dp</b>	
A	identification for mask set
M	identification for protocol version
n	Field number
y	Y position in 1/100 mm
x	X position in 1/100 mm
p	identification for phantom field 0 = print                                   1 = no print
a	identification for field type 56 = ITF 14
d	rotation 0 = 0°   1 = 90°   2 = 180°   3 = 270°
h	symbol height in 1/100 mm
v1	relation 1; module width 'THICK'
v2	relation 2; module width 'THIN' and/or SC factor
pz	check digit calculation 0 = no check digit calculation 1 = check digit calculation 4 = inverse - no check digit calculation 5 = inverse - check digit calculation
z	human readable line 0 = no human readable line 1 = with human readable line
dp	datum point 1 = left top                               2 = centre top                           3 = right top 4 = left centre                             5 = centre centre                       6 = right centre 7 = left bottom (default)                8 = centre bottom                       9 = right centre

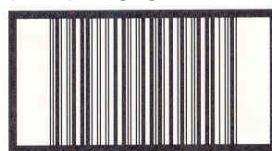

In order to print the bearer bars of an ITF 14 barcode, the following additional properties for Code 2/5 interleaved must be set:

For this the following field properties are determined:

Property identifier	Description
<b>BT</b>	bearer bar type 0 = no bars 1 = above/below 2 = rectangle
<b>BW</b>	bearer bar width in 1/100 mm
<b>QZ</b>	quiet zone in 1/100 mm

#### Example

```
// BARCODE (1/100 mm)
(SOH) AM[1]4498;7076;0;31;2;3000;12;4;0;1;3 (ETB)
(SOH) AC[1]BT=2;BW=150;QZ=600 (ETB)
(SOH) BM[1]1234567890123 (ETB)
```

12340678901236

## 5.4 PDF417

<b>AM[n]y;x;p:a;d;s;rw;rh;ec;z;dp;c;r</b>	
A	identification for mask set
M	identification for protocol version
n	Field number
y	Y position in 1/100 mm
x	X position in 1/100 mm
p	identification for phantom field 0 = print 1 = no print
a	identification for field type 50 = PDF417
d	rotation 0 = 0° 1 = 90° 2 = 180° 3 = 270°
s	symbol size
rw	relation width
rh	relation height
ec	error correction level 0 - ECC Level = 0 1 - ECC Level = 2 2 - ECC Level = 6 3 - ECC Level = 14 4 - ECC Level = 30 5 - ECC Level = 62 6 - ECC Level = 126 7 - ECC Level = 254 8 - ECC Level = 510
z	style 0 = standard 1 = truncated 2 = naked 3 = bare
dp	datum point 1 = left top 2 = centre top 3 = right top 4 = left centre 5 = centre centre 6 = right centre 7 = left bottom (default) 8 = centre bottom 9 = right bottom
c	number of columns 0 = automatic, 1-30
r	number of rows 0 = automatic, 3-90

## 5.5 MAXICODE

AM[n]y;x;p;a;d;0;sn;ns;m;0;dp	
A	identification for mask set
M	identification for protocol version
n	field number
y	Y position in 1/100 mm
x	X position in 1/100 mm
p	identification for phantom field 0 = print 1 = no print
a	identification for field type 51 = MAXICODE
d	rotation 0 = 0° 1 = 90° 2 = 180° 3 = 270°
0	dummy
sn	symbol number
ns	quantity of symbols
m	mode 2 = Structured Message (US Carrier) 3 = Structured Message (International Carrier) 4 = Default message
0	dummy
dp	datum point 1 = left top 2 = centre top 3 = right top 4 = left centre 5 = centre centre 6 = right centre 7 = left bottom (default) 8 = centre bottom 9 = right bottom

## 5.6 DataMatrix

AM[n]y;x;p;a;d;s;aw;ah;ec;f;dp			
A	identification for mask set		
M	identification for protocol version		
n	field number		
y	Y position in 1/100 mm		
x	X position in 1/100 mm		
p	identification for phantom field 0 = print 1 = no print		
a	identification for field type 52 = DataMatrix		
d	rotation 0 = 0° 1 = 90° 2 = 180° 3 = 270°		
s	symbol size in 1/100 mm

## 6 Text Set

<b>BM[n]text</b>	
B	identification for text set
M	identification for extended protocol
n	field number
text	data contents, text

<b>BV[n]text</b>	
B	identification for text set
V	identification for selection by field name
n	field name
text	data contents, text

<b>BF[n]text</b>	
B	identification for text set
F	identification for selection by free definable field number
n	field number
text	data contents, text

## 6.1 Examples

### Mask set

Mask statement	[SOH]AM[1]2000;4000;0;1;0;2;1;1;0[ETB]
field number	
y position 20 mm	
x position 40 mm	
no phantom field	
bitmap font	
position 0	
font 2	
extension in y direction 1	
extension in x direction 1	
no blank pixel	

### Texts set

Text statement	[SOH]BM[1]this is a test [ETB]
field number 1	
text "this is a test"	

**Text set with variable definition:** [SOH]BM[125]=CN(0,0,3,1,1)000[ETB]

### Example label

ASCII data	Identification
⊗AM[1]3600;4600;0;33;0;1500;0;4;1;1⊕C_R L_F	mask set for bar code
⊗BM[1]444444444444⊕C_R L_F	appropriate text set

⊗BM[6]99,-- ⊕C_R L_F	
⊗FBA000r06000000⊕	number of lines
⊗FBBA00r00001000⊕	number of items
⊗FBC000r00000000⊕	start

# : graphic data in PCX format

⊗: SOH (1<sub>hex</sub> bzw 5E<sub>hex</sub>)

⊕: ETB (17<sub>hex</sub> bzw. 5F<sub>hex</sub>)

C<sub>R</sub>: CarriageReturn (0D<sub>hex</sub>)

L<sub>F</sub>: LineFeed (0A<sub>hex</sub>)

## 7 Graphic Set

### 7.1 General Graphic Format

This format is supported by all our print modules but note that a 8 bit transmission is absolute necessary.

SOH	D	p	p	p	p	lb	lb	lb	b	b	b	gb.....	ETB
-----	---	---	---	---	---	----	----	----	---	---	---	---------	-----

															min.	max.
<b>D</b>	=	identification for graphic set														
<b>p</b>	=	pixel line from above						'0000'	'1900'							
<b>lb</b>	=	1. byte from left						'000'	'100'							
<b>b</b>	=	quantity of bytes						'1'	'100'							
<b>gb</b>	=	graphic bytes														

**Graphic byte**

1 graphic bit = 0,083 x 0,083 mm

### 7.2 Graphic in PCX Format

It is possible to transfer graphic data as a PCX-file (e.g. PaintBrush) to the print module. With this type of data transfer the PCX-file is transferred in a compressed form. Hereby the RLE-procedure is used and therefore the graphic data were reduced by approx. 30 %. This means that the effective transferring time for 300 dpi print modules is cut in halves.

To set the print module ready for receiving PCX-data the protocol has to be switched over and hereby the following command set will be defined:

SOH	A	X	n	n	n	y	y	y	y	y	y	x	x	x	x	m	dp	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	-----

<b>n</b>	Index of transferred graphic to print module internal maintenance at present not processed (000)															
<b>y</b>	Y coordinate of graphic in 1/100 mm															
<b>x</b>	X coordinate of graphic in 1/100 mm															
<b>m</b>	Mode 0 = standard (background is overwritten) Mode 1 = transparency (background is maintained) Mode 2 = inverse (background is overwritten) Mode 3 = inverse transparency (background is maintained)															
<b>dp</b>	datum point 1 = left top                          2 = centre top                  3 = right top 4 = left centre                      5 = centre centre              6 = right centre 7 = left bottom (default)            8 = centre bottom              9 = right bottom															

- It is recommended to observe that directly after the final sign (ETB) no separator res. fill character such as  $C_R L_F$  is indicated.
- The print module supports the following PCX versions: 5, 3, 2 and 0.
- It is necessary that the corresponding PCX-file is available as monochrome (black/white).
- The graphic has to be available in the original size as the print module is not able to change the size by itself.

### NOTICE!

Before print start, indicated by parameter set 'FBC', the definition of field number, lines and pieces has to be effected via the parameter sets (FBA res. FBB).

## 7.3 Example PCX File

-\*\*\* PCX\_GRAPHIC-INFO \*\*\*-

## 8 Variables

### 8.1 Set Structure

SOH	BM	[n]	=	v	v	(	p1	p2	p...	pn	)	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	----	----	------	----	---	----	----	------	-----	-----

= start of function  
 vv variable type  
 SC link field  
 CN counter  
 CC extended counter  
 CL date/time  
 CU currency variable  
 SH shift variable  
 MD memory card data  
 ( start of variable parameter block  
 p1...pn variable parameter  
 ) end of variable parameter block

#### NOTICE!

In case you want to print a text which corresponds exactly to the variable definition then you have to place '!' before.

SOH	BM	[n]	!	=	v	v	(	p1	p2	p...	pn	)	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	---	----	----	------	----	---	----	----	------	-----	-----

### 8.2 Link Field

SOH	BM	[n]	=	S	C	(	p1	;	p2	;	p...	;	pn	)	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	----	---	----	---	------	---	----	---	----	----	------	-----	-----

= SC identification of link field  
 p1...pn identification of link elements (field number or constant text)  
 field number is entered without leading '0'  
 constant text is included in " but these marks are not printed

#### NOTICE!

Reference fields can be constant text or variables but no link fields.

#### Example

=SC(1;2;3) --> Printout: Field1Field2Field3

=SC(1;"constant";2) --> Printout: Field1constantField2

### 8.3 Counter

SOH	BM	[n]	=	C	N	(	t	;	m	;	c	;	+/-	s	;	i	;	h	;	r	)	t1	t2	...	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	-----	---	---	---	---	---	---	---	---	----	----	-----	-----	-----

= CN	identification counter
t	type of counter
0	numerical
1	letters only
2...36	radix, base of the counter
m	function mode
0	standard
1	return to start value
2	enter the start value at the beginning of printing (default = existing start value)
3	enter the start value at the beginning of printing (default = last final number)
4	reset start value at cycle end (only for DPM III)
5	reset start value by I/O signal
6	time-controlled resetting
7	time-controlled resetting with input of initial value (default = last final value)
c	digit where the numbering starts counting
+/-	direction
+	adding
-	subtracting
s	step width
i	update interval (number of labels with identical number)
h	time by which the counter is reset (function mode 6 and 7) in format 'HH:MM' e.g. 00:00 = reset counter at 0:00 (optional, only for function mode 6 and 7)
r	reset value (optional, only for function mode 6 and 7; default = text and/or initial value)
t1, t2, ...	text res. start value of counter

Example:

Input: =CN(10;7;4;+1;1;06:00;0001)1234

The enquiry for the initial value is effected at print start and  
at 6:00 the counter variable is reset to value 0001.

## 8.4 Extended Counter

SOH	BM	[n]	=	C	C	(	+/-	s	;	i	;	m	;	z	;	n	;	x	)	t	ETB
-----	----	-----	---	---	---	---	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- = CC identification of numeric counter
- +/- direction
  - + counter adding
  - counter subtracting
- s step width
- i update interval  
(number of labels with identical number)
- m function mode
  - 0 standard
  - 1 return to start value
  - 2 enter the start value at the beginning of printing  
(default = existing start value)
  - 3 enter the start value at the beginning of printing  
(default = last final number)
  - 4 reset start value at cycle end  
(only for DPM III)
  - 5 set min. / max. value
  - 6 set start value
  - 7 print end
- z leading zeros
  - 0 no leading zeros
  - 1 printout with leading zeros
- n minimum value (max. -999999999)
- x maximum value (max. 999999999)
- t start value  
(the number of digits determines the format for the printout with  
leading zeros  
(max. 999999999)

Example:

Input: =CC(+1;2;5;0;1,999)0050

Printout: 50, 51,...999, 1, 2, ...

## 8.5 Date and Time

**SOHBM[n]=CL(m;d;i;n;c;mo;pd;pm;md;mm;rw;ws)t1t...t70ETB**

= CL identification date/time

m month offset to the actual date

d day offset to the actual date

i update interval

(0 = at the beginning of a print order, 1 = each label)

### Optional parameters

n minute offset to the actual time  
(negative entry/value possible)

c correction month overflow  
(0 = change to the next month, 1 = remain in current month)

### Optional parameters for BBE date

mo input mode

0: standard; display current date of real time clock

1: display calculated date, modification possible

2: display calculated date, no modification possible

pd max. positive correction days

pm max. positive correction months

md max. negative correction days

mm max. negative correction months

### Optional parameters for rounded date

rw rounded weekday: 1 = Sunday ... 7 = Saturday; 0 = no rounding

ws start of week, format: "D-HH:MM",  
e.g. 1-00:00 = Sunday, 0:00 Uhr

#### Example

Actual date as per Real Time Clock: 08.12.

Input: =CL(0;0;0)<DD.MO.> Printout: 08.12.  
Input: =CL(2;1;0)<DD.MO.> Printout: 09.02.

#### Example for BBE date

Input: =CL (0;0;0;0;0;1;3;2;3;2)<DD.MO.>

At print start the calculated date is displayed at the print module and can be modified (+/- 3 days and +/- 2 months):

Display: ID\_1 DD:MO::YY  
08.12.11

#### Example for rounded date

The beginning of the week is on Sunday (08.12.) at 00:00. The date of Monday should be printed the whole week.

Input: =CL(0;0;0;0;0;0;0;0;0;2;1-00:00)<DD.MO.>

Current date	Rounded date
07.12. 23:59:59	02.12.
08.12. 00:00:00	09.12.
09.12.	09.12.
14.12. 23:59:59	09.12.
15.12. 00:00:00	16.12.

## 8.6 Format Identifier (Date & Time)

<b>Standard format</b>	
HH	Hours 2-digit (24 hours)
<b>HE</b>	<b>Hours 2-digit (12 hours)</b>
MI	Minutes 2-digit
SS	Seconds 2-digit
<b>AM</b>	<b>AM/PM output</b>
DD	Day 2-digit
MO	Month 2-digit
YYYY	Year 4-digit
YY	Year 2-digit
Y	Year 1-digit
WW	Calendar week
DW	Day of week (Sunday = 0)
DW1	Day of week (Sunday = 1)
DwX	Day of week An arbitrary ASCII character can be used for x, from which it is counted consecutively
DOWxxxxxxxx	Day of week - variable For x, any ASCII character can be used The first ,x' denotes Sunday, the next denotes Monday and so on until Saturday For each weekday a character must be created
DOY	Day of year 3-digit (First January = 1)
DY	Day of year 3-digit (First January = 0)
<b>Examples</b>	
DD.MO.YY	22.01.10
MO/DD/YYYY	01/22/2010
YY-MO-DD	10-01-22
YYMODD	100122

The format identifier 'HE' and 'AM'/'am'/'Am' are supplemented.  
Therefore the output of hours in 12-hours mode is possible. By the additional output of format identifier 'AM' the output of time in american/english format is possible.

### Example

```
=CL(0;0;0;0)<HH:MI:SS>      --> 15:30:00
=CL(0;0;0;0)<HE:MI:SS>      --> 03:30:00
=CL(0;0;0;0)<HE:MI:SS AM>    --> 03:30:00 PM
=CL(0;0;0;0)<HE:MI:SS am>    --> 03:30:00 pm
=CL(0;0;0;0)<HE:MI:SS Am>    --> 03:30:00 p.m.
```

By separating the output of time and AM/PM output in 2 text fields, also the following output format is possible:  
--> 03:30:00 pm

<b>Extended format</b>	
XMO	Name of month short
XSO	Name of month long
XSD	Weekday short
XLD	Weekday long
For X you can enter the country identification of desired language	
C	= Canadian
D	= Danish
E	= English
F	= French
G	= German
I	= Italian
N	= Dutch
O	= Norwegian
S	= Spanish
U	= Finnish
W	= Swedish
<b>Examples:</b>	
DD.EMO.YY	22.JAN.10
DD.ESO YYYY	22. January 2010
ELD,DD.GMO.YY	Friday, 22. JAN.10
ESD,DD.MO.YY	FR, 22.01.10

## 8.7 Currency Variable

SOH	BM	[n]	=	C	U	(	a   ;   b   ;   c   ;   d   ;   e   ;   f   ;   g   )	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	---	----	----	------	-----	-----

= CU	Signification of variable Euro
a	ANSI-Code of thousand separator as decimal figure
b	ANSI-Code of comma separator as decimal figure
c	Quantity of numbers after the comma as decimal figure
d	Operand A      Before the processing the variable Euro
e	Operand B      calculates the term
f	Operand C $\frac{A \times B}{C}$
g	Rounding format
t1, t2, ...	Format string, is indicated by "< >"

**Example:**

In case the contents of field 20 has to be converted from USD into EUR the definition of variable for the user defined format is as follows:

B01     '=CU(46;44;2;20;"1,0"";0,68861";"0,01")Result: <>Euro'  
 B20     1.250,44 USD

**Printout:**    1.250,44 USD  
 Result:    1.815,89 Euro\*

---

\* 1 USD = 0,68861 Euro (11.01.2010)

## 8.8 Shift Variable

SOH	BM	[n]	=	S	H	( )	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	-----	----	----	------	-----	-----

= SH identification of shift variable

### NOTICE!

The shift variable did not need any parameters. The settings for the output are defined with the corresponding parameter sets.  
(see above)

#### Beispiel

The shift times are defined: 00:00 - 11:59 "Shift1"  
12:00 - 23:59 "Shift2"  
=SH() Printout at 10:00 Uhr: "Shift1"  
=SH() Printout at 13:00 Uhr: "Shift2"

#### Set shift times

SOH	F	C	I	D	-	-	r	N	N	H	H	M	M	h	h	m	m	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NN = ID [01 ... 24]

HH = start hour

MM = start minute

hh = end hour

mm = end minute

#### Get shift variable

SOH	F	C	I	D	-	-	w	N	N	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	N	N	H	H	M	M	h	h	m	m	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Set shift text

SOH	F	C	I	E	-	-	r	N	N	T	T	T	T	T	T	T	T	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NN = ID [01 ... 24]

T = max. 10 characters

#### Get shift variable

SOH	F	C	I	E	-	-	w	N	N	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	N	N	;	T	T	T	T	T	T	T	T	;	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## 8.9 User Guiding

SOH	BM	[n]	=	U	G	(	c	; t	; m	; ap	; ae	; sp )	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	---	-----	-----	------	------	--------	----	----	------	-----	-----

= UG identification user guiding

c start position for the entry

t type of entry

0 numerical

1 alphanumerical

m mode of entry

0 do not jump over special characters

1 jump over special characters

ap alignment at printing

0 aligned to the right side

ae alignment at entry

0 aligned to the right side

sp prompt text for the variable, max. 24 characters

The entry has to be included in ".

### Example

Entry: =UG(1;0;0;0;0;"Enter article no.")<123456>  
Display:

SPX II  
Enter article no.  
123456

## 8.10 User Guiding with Mask

SOH	BM	[n]	=	U	M	(	c	;	t	;	m	;	ap	;	ae	;	sp	;	d	;	ma	)	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	----	---	----	---	----	---	---	---	----	---	----	----	------	-----	-----

- = UM identification user guiding with mask
- c start position for the entry
- t type of entry (is ignored with existing mask definition)
  - 0 numerical
  - 1 alphanumeric
- m mode of entry (is ignored with existing mask definition)
  - 0 do not jump over special characters
  - 1 jump over special characters
- ap alignment at printing
  - 0 aligned to the right side
- ae alignment at entry
  - (always left aligned with existing mask definition)
  - 0 right aligned
  - 1 left aligned, cursor at the beginning of the text
  - 2 left aligned, cursor at the start position
  - 3 right aligned, remove fill characters
  - 4 left aligned, cursor at the beginning of the text, remove fill characters
  - 5 left aligned, cursor at the start position, remove fill characters
- sp prompt text for the variable, max. 24 characters  
The entry has to be included in ".
- d deleting setpoint value
  - 0 setpoint value remains at key entry (inserting mode)
  - 1 with first key press the setpoint value disappears
  - 2 setpoint value is retained (overwrite mode)
- ma definition of mask  
possible mask characters are
  - 9 numbers only
  - # only numbers and leading signs
  - ? letters only
  - a alphanumeric characters (letters and numbers)
  - C any characters

**Example**

Entry: =UM(1;0;0;0;0;"Enter article no. " ;0;"999-aa")<123-xx>

Display:

```
SPX II
Enter article no.
123-xx
```

## 8.11 Memory Card Data

SOH	BM	[n]	=	MD(FN="filename";SE='x';CH=x;SC="x";SF="x";RC="x")	ETB
-----	----	-----	---	--	-----

= MD identification of memory card data  
 FN file name of table onto memory card with CSV data  
 SE Separator sign (default = ':')  
 CH column name in the first line (0 = no, 1 = yes)  
 SC name and/or number of column that should be referenced  
 SF field name and/or field index of field onto the label, which  
 contains the searched data  
 RC name and/or number of column, which contains the data to be  
 printed

### NOTICE!

If in parameter SF a field name is indicated, this must have been defined for the appropriate field by an AC attribute statement!

#### Example

```
AC[1]NAME="FCODE"
BM[2]=MD(FN="a:\daten.csv";SE='(';CH=1;SC="Farbcode";SF="FCODE";
RC="IC-Nummer")
```

Field 1	Output Field 2
00001	121478242
23252	784587448

daten.csv - Editor	
Datei Bearbeiten Format	
<b>Farbcode;IC-Nummer</b>	
00001;	121478242
00002;	658447852
45875;	121475284
59874;	325874158
24714;	002351478
21514;	325654125
77757;	704507440

## 8.12 GS1-128 Parser

### NOTICE!

By means of this variable type, the content of an application identifier in a GS1-128 bar code can be determined.

SOH	BM	[n]	=	A   I (   p   ;   Ai   )	ETB
-----	----	-----	---	--------------------------	-----

= AI identification of GS1-128 parser  
 p identification of the link element (field number)  
 Ai application identifier

#### Example

Field 1 ="00123456789012345675" GS1-128 with AI00

=AI(1;"00") Printout: 123456789012345675

## 8.13 EPC Calculation (Electronic Product Code)

**SOH | BM | [n] = E | P | C ( | M ; L ; F ; P ; N1 ; {N2} | ) | ETB**

= EPC	identification of EPC calculation
M	coding method
L	length of manufacturer number (company prefix)
F	filter value
P	verification of check digit
N1	identification of link element (field number)
N2	identification of link element (field number) - optional

For more information, visit the following web sites:

[www.epcglobalinc.org](http://www.epcglobalinc.org) or [www.gs1.org](http://www.gs1.org)

Param.	Value range		
M	0 = coding method SSCC96	3 = coding method GRAI96	
	1 = coding method SGTIN96	4 = coding method GIAI96	
	2 = coding method SGLN96		
L	6..12		
F	SSCC96	All Others	000
		Undefined	001
		Logistical / Shipping Unit	010
		All Others	000
	SGTIN96	Retail Consumer Trade Item	001
		Standard Trade Item Grouping	010
		Single Shipping/ Consumer Trade Item	011
		All Others	000
	SGLN	Physical Location	001
		All Others	000
P	0 = no verification; 1 = verification		
N1, N2	any		

### Example 1

Field 1 ="00123456789012345675“ GS1-128 with AI00  
 Field 2 =AI(1;“00“) --> Printout: 123456789012345675  
 Field 3 =EPC(0;12;0;1;2) --> Printout: 3100DA7557D32C38E7000000  
 The EPC is calculated with the content of Field 2. The coding method SSCC96 is used. In Field 2 a valid NVE must be represented (18-digit, correct check digit).

### Example 2

Field 1 ="4141234567890128254123“ GS1-128 with AI00, AI254  
 Field 2 =AI(1;“414“) --> Printout: 1234567890128  
 Field 3 =AI(1;“254“) --> Printout: 123  
 Field 4 =EPC(2;10;0;0;2;3) --> Printout: 3208499602D2180000000007B  
 The EPC is calculated with the content of Field 2 and Field 3. The coding method SGLN96 is used. In Field 2 a valid ILN must be represented (13-digit). In the example, Field 3 contains an optional serial number. No verification of check digit of ILN (8) is effected.

\* only when using option RFID

## 8.14 Check Digit

SOH	BM	[n]	=	C	D	(	d	;	s	;	l	;	t	;	w	;	m	;	r	;	o	)	t1	t...	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	------	-----	-----

- = CD Identification of check digit
- d Data for check digit calculation (field number of constant text)  
Constant text is enclosed in "".
- s Start position within data  
1 ...n Start calculation at digit x
- l Number of digits. If the parameter is not indicated, the remaining data (from start position) is used for the check digit calculation.
- t Check digit type
  - 0 Modulo 10 (weighting 3)
  - 1 Modulo 11
  - 2 Modulo 43
  - 3 Modulo 47 (weighting 15)
  - 4 Modulo 47 (weighting 20)
  - 5 Modulo 103
  - 6 Customized

### Optional parameters for customized check digit

- w Weighting.  
Constant text enclosed in "" - contains the individual weighting values or an interval.  
Individual values: "x<sub>1</sub>,x<sub>2</sub>"  
Interval: "x<sub>1</sub>...x<sub>2</sub>"
- m Modulo
- r Add result to
- o Print only one digit
  - 0 No
  - 1 Yes

### Example

- |           |                                       |
|-----------|---------------------------------------|
| Entry:    | =CD("123456789012";0;0;0)             |
| Printout: | 8                                     |
| Entry:    | =CD("1234567890";0;0;6;"1,3";10;10;1) |
| Printout: | 5                                     |

### 8.15 Substring

SOH	BM	[n]	=	S	S	(	d	;	s	;	I	)	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	-----

- = SS Identification of substring
- d Data used for substring extraction (field number or field name or constant text).  
Constant text is enclosed in "".
- s Start position within data. If this parameter is omitted, the substring extraction starts with the 1st character of the data string.  
1 n Start at digit x
- I Number of digits. If this parameter is omitted, all characters from the start position to the end of the data string are returned.  
1 ...n At the start position x digits

**Example:**

Entry:	=SS("1234567890";4;3)
Printout:	456
	Field "ARTIKELNR" has the contents "370012330295"
Entry:	=SS(ARTIKELNR;1;4)
Printout:	3700

## 9 Parameter Sets

### 9.1 Label Parameters

#### Set label photocell type

```
SOH F C D E - - r N - - - - - - ETB
```

N: 0 = transmission photocell normal

N: 1 = reflection photocell

N: 2 = transmission photocell inverse

N: 3 = reflection photocell inverse

N: 4 = ultrasonic photocell (option)

#### Get label photocell type

```
SOH F C D E - - w p p p p p p p p ETB
```

#### Answer

```
SOH A N - - - - - - - p p p p p p p p ETB
```

#### Set label type

```
SOH F C D A - - r N - - - - - - ETB
```

N: 0 = change to adhesive labels (automatically measure process)

N: 1 = change to continuous labels

#### Get label type

```
SOH F C D A - - w p p p p p p p p ETB
```

#### Answer

```
SOH A N - - - - - - - p p p p p p p p ETB
```

#### Measure label

In case of loading a new label roll it is possible to start measuring by this command.

```
SOH F C B - - - r - - - - - - - - ETB
```

The current label and gap length in the print module can be sent to the Host computer:

```
SOH F C B - - - w p p p p p p p p p ETB
```

After this command the print module sends the following answer:

#### Answer

```
SOH A E E E E S S S S p p p p p p p p ETB
```

EEEE = label length in mm (ASCII)

SSSS = gap length in mm (ASCII)

**Set label length in 1/100 mm**

SOH	F	C	C	L	-	-	r	N	N	N	N	N	N	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = value of label length in 1/100 mm, 7 digit ASCII number

**Get label length in 1/100 mm**

SOH	F	C	C	L	-	-	w	N	N	N	N	N	N	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	N	N	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set gap length in 1/100 mm**

SOH	F	C	C	M	-	-	r	M	M	M	M	M	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

M = value of gap length in 1/100 mm, 5 digit ASCII number

**Get gap length in 1/100 mm**

SOH	F	C	C	M	-	-	w	M	M	M	M	M	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	M	M	M	M	M	-	-	p	p	p	p	p	p	p	ETB

**Set label width in 1/100 mm**

SOH	F	C	C	O	-	-	r	N	N	N	N	N	N	N	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = indication of label width in 1/100 mm, 7 digit ASCII number

**Get label width in 1/100 mm**

SOH	F	C	C	O	-	-	w	P	P	P	P	P	P	P	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	N	N	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set label error length in mm**

SOH	F	C	D	G	A	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = indication of label error length in mm (1 ... 999)

**Get label error length**

SOH	F	C	D	G	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set label synchronization**

SOH	F	C	D	G	B	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get label synchronization**

SOH	F	C	D	G	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set number of columns**

SOH	F	C	C	H	A	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = number of columns (1 ... 9)

**Get number of columns**

SOH	F	C	C	H	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set column width**

SOH	F	C	C	H	B	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = indication of column width in 1/10 mm (0 ... 999)

**Get column width**

SOH	F	C	C	H	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set label alignment**

SOH	F	C	C	J	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = left

N: 1 = centre

N: 2 = right

**Get label alignment**

SOH	F	C	C	J	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set contrast**

SOH	F	C	A	B	-	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: indication of contrast in % (010 ... 200)  
necessary to transmit a 3 digit ASCII number.

**Get contrast**

SOH	F	C	A	B	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set flip label**

SOH	F	C	D	O	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = flip label Off  
N: 1 = flip label On

**Get flip label**

SOH	F	C	D	O	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set rotate label**

SOH	F	C	D	N	-	-	r	X	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

X: 0 = rotate label Off  
X: 1 = rotate label On

**Get rotate label**

SOH	F	C	D	N	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	X	-	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set mode flip/rotate label**

SOH	F	C	D	S	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = flip/rotate label at the centre point of label  
N: 1 = flip/rotate label at the centre point of printhead

**Get mode flip/rotate label**

SOH	F	C	D	S	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set material selection**

SOH	F	C	D	N	C	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN: indication of material

0 = type 1

1 = type 2

**Get material selection**

SOH	F	C	D	N	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set scan position**

SOH	F	C	D	E	A	-	r	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NN = indication of scan position in % of the set label length (01 ... 99)  
value depends on the label length**Get scan position**

SOH	F	C	D	E	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set sensitivity of transmission photocell**

SOH	F	C	D	E	B	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = indication of photocell sensitivity  
3 digit ASCII number (001 ... 255)**Get sensitivity of transmission photocell**

SOH	F	C	D	E	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set sensitivity of reflexion photocell**

SOH	F	C	D	E	C	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = indication of photocell sensitivity  
NNN = 3 digit ASCII number (001 ... 255)**Get sensitivity of reflexion photocell**

SOH	F	C	D	E	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## 9.2 Photocell

**Get minimal measured level at label photocell  
(label parameter A)**

SOH	F	C	M	A	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = value of measured level, 3 digit ASCII number in 1/100 V

**Get maximal measured level at label photocell  
(label parameter B)**

SOH	F	C	M	A	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = value of measured level, 3 digit ASCII number in 1/100 V

**Set switching threshold at label photocell (label parameter C)**

SOH	F	C	M	A	C	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = value of switching threshold, 3 digit ASCII number in 1/100 V

value is automatically calculated at measuring process at

print module ( $\text{min} + \frac{\text{max}-\text{min}}{3}$ )

3

**Get switching threshold**

SOH	F	C	M	A	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = value at measured switching threshold

3 digit ASCII number in 1/100 V

**Get current value at transfer ribbon photocell**

SOH	F	C	M	B	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = transfer ribbon inserted

N: 1 = no transfer ribbon

**Get current value at label photocell**

SOH	F	C	M	B	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value at label photocell, 3 digit ASCII number in 1/100 V

**Get status at dispenser photocell**

SOH	F	C	M	B	E	A	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = no label at photocell

N: 1 = label at photocell

Set switching threshold of dispenser photocell is taken into consideration.

### 9.3 Device Settings

#### Set print speed

SOH	F	C	A	A	-	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: Indication of print speed in mm/s

SPX II 103/8 = 50 ... 300

SPX II 104/8 = 50 ... 300

SPX II 106/12 = 50 ... 300

SPX II 106/24 = 50 ... 100

SPX II 108/12 = 50 ... 300

SPX II 162/12 = 50 ... 200

It is necessary to transmit a 3 digit ASCII number

#### Get print speed

SOH	F	C	A	A	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Set transfer ribbon control On/Off

SOH	F	C	D	B	-	-	r	N	M	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 1 = transfer ribbon control On

N: 0 = transfer ribbon control Off

M: 0 = weak sensibility

M: 1 = strong sensibility

#### Get transfer ribbon On/Off

SOH	F	C	D	B	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	N	M	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Set field handling

SOH	F	C	D	K	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = field handling Off

N: 1 = graphic received

N: 2 = delete graphic

N: 3 = restore graphic

#### Get field handling

SOH	F	C	D	K	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set print module language**

SOH	F	C	D	I	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- |                    |                   |                   |
|--------------------|-------------------|-------------------|
| N: 0 = German      | N: 8 = Italian    | N: 15 = not used  |
| N: 1 = English     | N: 9 = Danish     | N: 16 = Ukrainian |
| N: 2 = French      | N: 10 = Polish    | N: 17 = Turkish   |
| N: 3 = Spanish     | N: 11 = Greek     | N: 18 = Swedish   |
| N: 4 = Finish      | N: 12 = Hungarian | N: 19 = Norwegian |
| N: 5 = Czech       | N: 13 = Russian   | N: 20 = Estonian  |
| N: 6 = Portuguese  | N: 14 = Chinese   | N: 21 = Romanian  |
| N: 7 = Netherlands |                   |                   |

**Get print module language**

SOH	F	C	D	I	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set external device parameters**

SOH	F	C	C	P	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- N: 0 = only parameter settings by interface for label length, gap length and label width are taken into consideration.  
 N: 1 = parameter settings by interface are processed  
 N: 2 = parameter settings by interface are not taken into consideration

**Get external device parameters**

SOH	F	C	C	P	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set Codepage**

SOH	F	C	C	N	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- N: 0 = Codepage 1252 West European (former ANSI)  
 N: 1 = Codepage 437 English  
 N: 2 = Codepage 850 Western European  
 N: 3 - 8 = not used  
 N: 9 = Codepage 852 Slavic  
 N: 10 = Codepage 857 Turkish  
 N: 11 = Codepage 1250 Central and East European  
 N: 12 = Codepage 1251 Cyrillic  
 N: 13 = Codepage 1253 Greek  
 N: 14 = Codepage 1254 Turkish  
 N: 15 = Codepage 1257 Baltic  
 N: 16 = WGL4 (UTF-8 coded data transmission)

Please find the tables referring to the above mentioned character sets on [www.carl-valentin.de/Downloads](http://www.carl-valentin.de/Downloads).

**Get Codepage**

SOH	F	C	C	N	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set customized entry**

SOH	F	C	D	U	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- N: 0 = Off      No question appears at the display. In this case the stored default value is printed.
- N: 1 = On      The question referring the customized variable appears once before the print start at the display.
- N: 2 = Auto     The question referring the customized variable appears again after print end. Additionally a query appears demanding the number of copies that should be print.
- N: 3 = Auto     without quantity:  
The question referring the customized variable appears again after print end. However, the same number of copies is printed.  
This number was defined once at the start of the print order.

**Get customized entry**

SOH	F	C	D	U	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set keyboard layout**

SOH	F	C	C	K	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- N: 0 = German  
N: 1 = English  
N: 2 = French  
N: 3 = Greek  
N: 4 = Spanish

N: 0 = Off

N: 1 = On

**Get autoload**

SOH	F	C	D	X	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set standard label On/Off**

SOH	F	C	M	K	E	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off (default) - print start without label definition signalizes error

N: 1 = On - standard label is printed without label definition

**Get standard label On/Off**

SOH	F	C	M	K	E	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set backfeed operating mode**

SOH	F	C	M	R	A	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = standard

N: 1 = automatic

N: 2 = no backfeed

N: 3 = optimized

**Get backfeed operating mode**

SOH	F	C	M	R	A	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	P	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set backfeed delay**

SOH	F	C	M	R	B	-	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: indication of delay time, 3 digit ASCII number in 1/100s

**Get backfeed delay**

SOH	F	C	M	R	B	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set label change confirmation**

SOH	F	C	S	D	F	C	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get label change confirmation**

SOH	F	C	S	D	F	C	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set label synchronization at switching on**

SOH	F	C	C	A	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = Measure

N: 2 = Label feed

**Get synchronization at switching on**

SOH	F	C	C	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set CMI length**

```
SOH|F|C|D|J|C|-r|N|---|---|---|ETB
```

NNN: value that the labels are retracted at a stop  
3 digit ASCII number in 1/100 mm (000 ... 100)

**Get CMI length**

```
SOH|F|C|D|J|C|-w|p|p|p|p|p|p|p|p|p|p|ETB
```

**Answer**

```
SOH|A|N|---|---|---|p|p|p|p|p|p|p|p|p|p|ETB
```

## 9.4 Dispenser I/O

### Set dispenser mode

```
SOH|F|C|D|C| - |r|N| - | - | - | - | - |ETB
```

N: 0 = Dispenser mode Off

N: 1 = External I/O static

N: 2 = Dispenser photocell

N: 3 = External I/O static continuous

N: 4 = Dispenser photocell continuous

N: 5 = External I/O dynamic

N: 6 = External I/O dynamic continuous

### Get dispenser mode

```
SOH|F|C|D|C| - |w|p|p|p|p|p|p|p|p|p|ETB
```

### Answer

```
SOH|A|N| - | - | - | - |p|p|p|p|p|p|p|p|p|ETB
```

### Set dispenser level photocell

```
SOH|F|C|C|F| - |r|V|N|N| - | - | - |ETB
```

V = pre-sign of offset (always +)

NN = offset value, 2 digit ASCII number in 1/10 Volt (5 ... 40)

### Get dispenser level photocell

```
SOH|F|C|C|F| - |w|p|p|p|p|p|p|p|p|p|ETB
```

### Answer

```
SOH|A|V|N|N| - | - | - |p|p|p|p|p|p|p|p|p|ETB
```

### Set sensitivity of dispenser photocell

```
SOH|F|C|C|F|A| - |r|N|N|N| - | - | - |ETB
```

NNN = Indication of photocell sensitivity

3 digit ASCII number (001 ... 255)

### Get sensitivity of dispenser photocell

```
SOH|F|C|C|F|A| - |w|p|p|p|p|p|p|p|p|ETB
```

### Answer

```
SOH|A|V|N|N| - | - | - |p|p|p|p|p|p|p|p|p|ETB
```

**Get status of I/O inputs**

SOH	F	C	M	D	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Inputs 1-8 / IO port 1-8:

- 1 = Port active
- 0 = Port not active
- = Port not connected, signal blocked or output

**Get status of I/O inputs**

SOH	F	C	M	D	A	B	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	---	---	---	---	---	---	-----

Inputs 1-16 / IO port 1-16:

- 1 = Port active
- 0 = Port not active
- = Port not connected, signal blocked or output

**Get status of I/O outputs**

SOH	F	C	M	D	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Outputs 1-8 / IO port 9-16:

- 1 = Port active
- 0 = Port not active
- = Port not connected, signal blocked or input

**Get status of I/O outputs**

SOH	F	C	M	D	B	B	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	---	---	---	---	---	---	-----

Outputs 1-16 / IO port 1-16:

- 1 = Port active
- 0 = Port not active
- = Port not connected, signal blocked or input

**Set IN signal level**

SOH	F	C	M	D	C	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

IO port 1-8 (dispenser inputs 1-8):

2 = Increased and decreased  
 1 = Increased  
 0 = Decreased  
 s = I/O signal by interface  
 x = I/O signal blocked

Only possible for IO ports that are specified as input.

**Get IN signal level**

SOH	F	C	M	D	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set IN signal level**

SOH	F	C	M	D	C	B	r	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	-----

IO port 1-16 (dispenser inputs 1-16):

2 = Increased and decreased  
 1 = Increased  
 0 = Decreased  
 s = I/O signal by interface  
 x = I/O signal blocked

Only possible for IO ports that are specified as input.

**Get IN signal level**

SOH	F	C	M	D	C	B	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	---	---	---	---	---	---	-----

**Set OUT signal level**

SOH	F	C	M	D	D	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

IO port 9-16 (dispenser outputs 1-8):

1 = Signal level 1  
 0 = Signal level 0  
 s = I/O signal by interface  
 x = I/O signal blocked

Only possible for IO ports that are specified as output.

**Get OUT signal level**

SOH	F	C	M	D	D	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set OUT signal level**

SOH	F	C	M	D	D	B	r	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	-----

IO port 1-16 (dispenser output 1-16):

- 1 = Signal level 1
- 0 = Signal level 0
- s = I/O signal by interface
- x = I/O signal blocked

Only possible for IO ports that are specified as output.

**Get OUT signal level**

SOH	F	C	M	D	D	B	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	---	---	---	---	---	---	---	-----

**Set software input**

SOH	F	C	M	D	F	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

IO port 1-8 (dispenser inputs 1-8):

- 1 = Set software input
- 0 = Delete software input
- = Ignore software input
- P = Pulse, run software input once

Only possible for IO ports whose input signal levels are activated for interface.

**Example:** Activate a start impulse

(SOH) FCMDF-rP----- (ETB)

**Set software input**

SOH	F	C	M	D	F	B	r	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	-----

IO port 1-16 (dispenser inputs 1-16):

- 1 = Set software input
- 0 = Delete software input
- = Ignore software input
- P = Pulse, run software input once

Only possible for IO ports whose input signal levels are activated for interface.

An IO port that was set (1) must be deleted (0) first to activate a function when next setting (1).

**Example:** Activate a start impulse

(SOH) FCMDFBrP----- (ETB)

**Set software output**

SOH	F	C	M	D	G	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

IO Port 9-16 (dispenser outputs 1-8):

- 1 = Set software output
- 0 = Delete software output

Only possible for IO ports whose output signal levels are activated for interface.

**Set software output**

SOH	F	C	M	D	G	B	r	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	-----

IO Port 1-16 (dispenser outputs 1-16):

- 1 = Set software output
- 0 = Delete software output

Only possible for IO ports whose output signal levels are activated for interface.

**Set dispenser offset**

SOH	F	C	S	D	A	-	r	V	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V = prefix of offsets (always +)

NNN = offset value, 3 digit ASCII number in 1/10 mm

**Get dispenser offset**

SOH	F	C	S	D	A	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set start signal delay**

SOH	F	C	S	D	D	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = start signal delay in 1/100 s (0 ... 999)

**Get start signal delay**

SOH	F	C	S	D	D	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set save start signal**

SOH	F	C	S	D	E	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get save start signal**

SOH	F	C	S	D	E	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set cancel continuous printing (operating mode)**

SOH	F	C	S	D	F	A	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get cancel continuous printing (operating mode)**

SOH	F	C	S	D	F	A	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Dispenser photocell****Get status of dispenser photocell**

SOH	F	C	M	B	E	A	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = no label at photocell

N: 1 = label at photocell

The set switching threshold of dispenser photocell is taken into consideration.

## 9.5 Interface

By means of the following commands the parameters of the serial interface can be set. Note that after sending one of the commands also the host computer changes the corresponding parameter of its interface to allow further communication of host computer-print module.

For all interface commands the interface is fixed with x. The following values are allowed:

x = 1 ⇒ COM 1

x = 2 ⇒ COM 2

In all other cases automatically the first serial interface is addressed.  
In the answers the addressed interface is also returned.

### Set all interface parameters

SOH	F	C	F	F	x	-	r	m	;	b	;	p	;	d	;	s	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

m = mode (0 = Off, 1 = On, 2 = On, without error message)

b = baud rate (2400, 4800, 9600, 19200, 38400, 115200)

p = parity (n = no parity, e = even parity, o = odd parity)

d = number of data bits (7, 8)

s = number of stop bits (1, 2)

### Get all interface parameters

SOH	F	C	F	F	x	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	x	;	m	;	b	;	p	;	d	;	s	;	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Example:** activate interface COM1 and set 9600 Baud, no parity, 8 data bits, 2 stop bits  
[SOH]FCFF1-r1;9600;n;8;2[ETB]

## Interface protocol

There are two different interface protocols available. Usually SOH = 01<sub>Hex</sub> and ETB = 17<sub>Hex</sub>. However there are host computers (e.g. AS/400), which cannot work with these characters. Therefore you can switch SOH = 5E<sub>Hex</sub> and ETB = 5F<sub>Hex</sub>. The host computer has to change the corresponding parameter as well.

### Set SOH and ETB

SOH	F	C	G	C	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = SOH = 01<sub>Hex</sub>, ETB = 17<sub>Hex</sub>

N: 1 = SOH = 5E<sub>Hex</sub>, ETB = 5F<sub>Hex</sub>

### Get SOH and ETB

SOH	F	C	G	C	-	-	W	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = SOH = 01<sub>Hex</sub>, ETB = 17<sub>Hex</sub>

N: 1 = SOH = 5E<sub>Hex</sub>, ETB = 5F<sub>Hex</sub>

N: 2 = other character combination

**Data memory****Set data memory**

SOH	F	C	G	D	-	-	r	M	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

M: 0 = Off, after receiving FBKA0r or FBDA0r the interface is locked until the end of the print order, i.e. you cannot write more data in the receiving buffer.

M: 1 = Off, after receiving FBKA0r or FBDA0r the interface is locked until the end of the print order, i.e. you cannot write more data in the receiving buffer.

M: 2 = Extended, after starting a print order it is possible to write more data in the receiving buffer. These data is processed during the print and the next label is prepared.

**Get data memory**

SOH	F	C	G	D	-	-	W	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	M	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set reaction to unknown interrogative set**

SOH	F	C	G	E	A	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = value range between 0 and 3

**Get reaction to unknown questions**

SOH	F	C	G	E	A	-	w	p	p	p	p	p	P	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## 9.6 Network

SOH	F	C	L	A	-	-	r	C	0	A	8	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

All network parameter sets start in the third column with a 'L'. Column 4 shows the identification for the corresponding network parameter. Column 5 can show another sub-identification.

Because of the fact that the argument size is limited to 8 characters, the IP addresses (IP address, network mask, gateway address) which consist of 32 bit are transmitted in HEX presentation.

For all data which is transmitted in HEX presentation (also the MAC address) it is allowed to use capital as well as small letters.

In contrary to the parameter settings of the other interfaces, the settings of the following sets were saved immediately onto Flash, i.e. it is not necessary to save the currently set configuration before switching off the print module so the modifications are still available after switching on.

So that the made modifications become active, also without print module Reset it is necessary to transmit a corresponding Z set which effects a Reset of the network devices.

### Set IP address (e.g. 192.168.0.21)

SOH	F	C	L	A	-	-	r	C	0	A	8	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Get IP address

SOH	F	C	L	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	C	0	A	8	0	0	1	5	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set netmask (e.g. 255.255.255.0)

SOH	F	C	L	B	-	-	r	F	F	F	F	F	0	0	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Get netmask

SOH	F	C	L	B	-	-	w	F	F	F	F	F	0	0	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	F	F	F	F	F	F	0	0	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set Gateway address (e.g. 192.168.0.1)

SOH	F	C	L	C	-	-	r	C	0	A	8	0	0	0	1	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Get Gateway address

SOH	F	C	L	C	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	C	0	A	8	0	0	0	1	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set transmission mode (e.g. auto recognition)**

SOH F C L D - - r 0 - - - - - ETB

0 = auto recognition                            3 = 100 MBit/s half duplex  
 1 = 10 MBit/s half duplex                    4 = 100 MBit/s full duplex  
 2 = 10 MBit/s full duplex

**Get transmission mode**

SOH F C L D - - w 0 - - - - - ETB

**Answer**

SOH A 0 - - - - - p p p p p p p p p ETB

**Set DHCP support**

SOH F C L E - - r N ETB

N: 0 = Off

N: 1 = On

**Get DHCP support**

SOH F C L E - - w p p p p p p p p p ETB

**Answer**

SOH A N - - - - - p p p p p p p p p ETB

**Assign print module name**

SOH F C L F - - R N N N N N N N N N N N N N N N N ETB

N = print module name can consist of max. 11 characters

N = [A...Z, a...z, 0...9, -, -]

**Get print module name**

SOH F C L F - - w p p p p p p p p p ETB

**Answer**

SOH A N N N N N N N ; p p p p p p p p p ETB

**Set MAC address (e.g. 00-07-4A-43-19-08)**

SOH F C L M B - r 0 0 0 7 4 A - - ETB

SOH F C L M A - r 4 3 1 9 0 8 - - ETB

SOH F C L M C - r 0 0 0 7 4 A 1 9 0 8 ETB

A MAC address has a width of 48 bit and is normally indicated in hexadecimals.

With the B record our identifier of the MAC address can be changed. All our machines start with 00-07-4A as default. This corresponds to the Memory-Pool which the MAC address committee assigned to us to guarantee that the MAC address is world-wide manufacturer-spreading unique.

With the A record any address can be set in our pool.

With the C record any address in our pool and the identification of the MAC address can be set/changed at the same time.

#### **Get MAC address**

SOH	F	C	L	M	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

SOH	F	C	L	M	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

SOH	F	C	L	M	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### **Answer**

SOH	A	0	0	0	7	4	A	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

SOH	A	4	3	1	9	0	8	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

SOH	A	0	0	0	7	4	A	4	3	1	9	0	8	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### **NTP Server**

NTP (Network Time Protocol) is a standardized Internet protocol permitting the synchronization of real-time clocks of network participants. The print module connects itself with a time server and align every 60 minutes its internal real-time clock with that of the time server in order to correct possible differences.

The address of server (IP address) can be freely configured in the print module. The communication is effected by UDP and the fixed set port 123. The service in the print module is deactivated by transmitting the server address 0.0.0.0.

The time servers work together with the coordinated world time (UTC) and therefore an additional time shift is needed compared to the reference time. For Germany it is e.g. +1 hour.

The current state of the connexion can be queried with a status set.

#### **Set NTP Server IP**

SOH	F	C	L	N	I	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N = X.X.X.X (X = 0 ... 255)

#### **Get NTP Server IP**

SOH	F	C	L	N	I	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### **Answer**

SOH	A	N	N	N	N	N	N	N	N	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

0.0.0.0 deactivates the NTP service

**Readout NTP status**

SOH	F	C	L	N	S	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = OK

N: 2 = Error

**Set time zone (hour offset)**

SOH	F	C	L	N	Z	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N: -12, 12

**Get time zone (hour offset)**

SOH	F	C	L	N	Z	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	N	N	N	N	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Reset Network Device**

SOH	F	C	L	Z	-	-	r	-----	ETB
-----	---	---	---	---	---	---	---	-------	-----

For this set is no enquiry possible. This set causes that modifications made by the transfer of the previous sets become effective.

## 9.7 Offset Values

### Set Y offset

SOH	F	C	C	D	-	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V = offset prefix (+ or -)

NNN = offset value, 3 digit ASCII number in 1/10 mm

### Get Y offset

SOH	F	C	C	D	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set X offset

SOH	F	C	C	E	-	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V = offset prefix (+ or -)

NNN = offset value, 3 digit ASCII number in 1/10 mm

### Get X offset

SOH	F	C	C	E	-	-	w	p	P	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set tear-off offset

SOH	F	C	C	G	-	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V = offset prefix (always +)

NNN = offset value, 3 digit ASCII number in 1/10 mm

### Get tear off offset

SOH	F	C	C	G	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set dispenser offset

SOH	F	C	S	D	A	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V = offset prefix (always +)

NNN = offset value, 3 digit ASCII number in 1/10 mm

### Get dispenser offset

SOH	F	C	S	D	A	-	w	P	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## 9.8 Service Functions

### Set zero point adjustment (Y value)

SOH	F	C	C	R	-	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Get zero point adjustment (Y value)

SOH	F	C	C	R	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V: offset prefix (+ or -)

NNN: offset value

3 digit ASCII number in 1/100 mm (-999 ... +999)

### Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set zero point adjustment (X value)

SOH	F	C	C	T	-	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Get zero point adjustment (X value)

SOH	F	C	C	T	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V: offset prefix (+ or -)

NNN: offset value

3 digit ASCII number in 1/100 mm (-999 ... +999)

### Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Set Online / Offline

SOH	F	C	M	K	C	-	r	M	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

M: 0 = Offline Off

M: 1 = Offline On

### Get Online / Offline

SOH	F	C	M	K	C	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	M	-	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

After changing by interface the display is automatically new initialized  
(by activated online/offline changing to online indication).

**Set reprint action**

SOH	F	C	M	K	D	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Get reprint action**

SOH	F	C	M	K	D	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = complete reprint

N: 1 = empty reprint

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set winder output**

SOH	F	C	M	P	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get winder output**

SOH	R	C	M	P	-	-	W	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Get status of printhead locking**

SOH	F	C	M	C	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	P	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = locking open

N: 1 = locking closed

**Get printhead temperature**

SOH	F	C	M	C	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = value of temperature, 3 digit ASCII number in degrees

**Set transfer ribbon prior warning**

SOH	F	C	M	L	A	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get transfer ribbon prior warning**

SOH	F	C	M	L	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	P	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set diameter for transfer ribbon prior warning**

SOH	F	C	M	L	B	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = 030 ... 090 diameter in mm

**Get transfer ribbon prior warning**

SOH	F	C	M	L	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Get current transfer ribbon diameter**

SOH	F	C	M	L	C	-	w	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set mode for transfer ribbon prior warning**

SOH	F	C	M	L	D	A	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Warning

N: 1 = Reduced speed

N: 2 = Error

**Get mode for transfer ribbon prior warning**

SOH	F	C	M	L	D	A	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set reduced speed (ribbon prior warning)**

SOH	F	C	M	L	D	B	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN =  $V_{\min} \dots V_{\max}$ : reduced print speed  
(depending on printer type)

**Get reduced speed (ribbon prior warning)**

SOH	F	C	M	L	D	B	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set printhead resistance**

SOH	F	C	M	G	-	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = value of resistance in Ohm.

**Get printhead resistance**

SOH	F	C	M	G	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	N	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set print length correction**

SOH	F	C	M	T	-	-	r	V	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V: offset prefix (+ or -)

NNN: print length correction value

3 digit ASCII number in 1/10 % (-100 ... +100)

**Get print length correction**

SOH	F	C	M	T	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set custom logo**

SOH	F	C	N	R	A	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get custom logo**

SOH	F	C	N	R	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Paper counter**

The paper counter (kilometer value) of print module as well as of printhead can only be enquired by interface and not reset to 0.

**Get paper counter of print module**

SOH	F	C	H	A	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	N	N	N	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Get paper counter of printhead**

SOH	F	C	H	B	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	N	N	N	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNNNNN = kilometer value of printer and/or printhead in meters  
(e.g. '00000123' = 123 m)

**9.9 Date & Time****Set date**

SOH	F	C	I	A	-	-	r	D	D	M	O	Y	Y	D	W	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

DD = day of month

MO = month

YY = year

DW = day of week ('00' = Sunday)

**Get date**

SOH	F	C	I	A	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	D	D	M	O	Y	Y	D	W	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set time**

SOH	F	C	I	B	-	-	r	H	H	M	I	S	S	A	M	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

HH = hours

MI = minutes

SS = seconds

AM = mode ('am' = 12 hours mode AM, 'pm' = 12 hours mode PM,  
'—' = 24 hours mode)

**Get time**

SOH	F	C	I	B	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	H	H	M	I	S	S	A	M	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### **Automatically adjust clock for daylight saving changes**

Because of the fact that there is no world-wide regulation if and when a changing of time between summer and wintertime (normal time) in the individual countries takes place, we distinguish between the following four formats for the definition for beginning and end of summertime.

<b>F 0:</b>	European format start of summertime = last Sunday in March end of summertime = last Sunday in October <b>W:</b> week (1 = first, ..., 5 = last) <b>WD:</b> day of week (0 = Sunday, ..., 6 = Saturday) <b>MM:</b> month (01 = January, ..., 12 = December)
<b>F 1:</b>	Fix date with indication of year <b>DD:</b> day <b>MM:</b> month (01 = January, ..., 12 = December) <b>YY:</b> year
<b>F 2:</b>	Fix date without indication of year <b>DD:</b> day <b>MM:</b> month (01 = January, ..., 12 = December)
<b>F 3:</b>	Week day after day in month <b>WD:</b> day of week (0 = Sunday, ..., 6 = Saturday) <b>DD:</b> after day (only the first day is taken into consideration) <b>MM:</b> month (01 = January, ..., 12 = December)

### **Set automatically adjust clock for daylight saving changes**

SOH	F	C	I	G	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### **Get automatically adjust clock for daylight saving changes**

SOH	F	C	I	G	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### **Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = automatically adjust clock for daylight saving changes off  
N: 1 = automatically adjust clock for daylight saving changes on

**Set beginning of summertime**

**F 0:** SOH F C I H - - r F W ; WD ; M M ; H H ; M M ETB

**F 1:** SOH F C I H - - r F D D ; M M ; Y Y ; H H ; M M ETB

**F 2:** SOH F C I H - - r F D D ; M M ; H H ; M M ETB

**F 3:** SOH F C I H - - r F W D ; D D ; M M ; H H ; M M ETB

**Get beginning of summertime**

SOH F C I H - - w p p p p p p p p p ETB

**Answer**

SOH A F W W D M M p p p p p p p p p ETB

The answer depends on each set format.

**Set end of summertime**

**F 0:** SOH F C I I - - r F W ; WD ; M M ; H H ; M M ETB

**F 1:** SOH F C I I - - r F D D ; M M ; Y Y ; H H ; M M ETB

**F 2:** SOH F C I I - - r F D D ; M M ; H H ; M M ETB

**F 3:** SOH F C I I - - r F W D ; D D ; M M ; H H ; M M ETB

**Get end of summertime**

SOH F C I I - - w p p p p p p p p p ETB

**Answer**

SOH A F W W D M M p p p p p p p p p ETB

The answer depends on each set format.

**Set time shifting**

SOH F C I J - - r N N N - - - - ETB

NNN = minutes

**Get time shifting**

SOH F C I J - - w p p p p p p p p ETB

**Answer**

SOH A N N N p p p p p p p p ETB

## 9.10 Password

**Set password**

```
SOH|F|C|K|A|---r|N|N|N|N|N|ETB
```

NNNN = input of password  
4 digit ASCII number in mm (0000 ... 9999)

**Get password**

```
SOH|F|C|K|A|---w|p|p|p|p|p|p|p|p|ETB
```

**Answer**

```
SOH|A|N|N|N|N|N|p|p|p|p|p|p|p|p|p|p|p|ETB
```

**Set function group**

```
SOH|F|C|K|B|---r|A|B|C|D|E|---ETB
```

A: Function menu  
0 = password Off  
1 = password On

B: CF card  
0 = password Off  
1 = standard directory allowed  
2 = password On

C: not assigned

D: Printer guiding  
0 = password Off  
1 = not assigned  
2 = Password On

E: Favorites menu  
0 = password Off  
1 = password On

**Get function group**

```
SOH|F|C|K|B|---w|p|p|p|p|p|p|p|p|p|ETB
```

**Answer**

```
SOH|A|a|b|c|d|e|---p|p|p|p|p|p|p|p|p|p|p|ETB
```

**Set password function menu**

SOH	F	C	K	D	A	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = input of password  
4 digit ASCII number in mm (0000 ... 9999)

**Get password function menu**

SOH	F	C	K	D	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set password favorites menu**

SOH	F	C	K	D	B	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = input of password  
4 digit ASCII number in mm (0000 ... 9999)

**Enquiere password favorites menu**

SOH	F	C	K	D	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set password memory card**

SOH	F	C	K	D	C	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = input of password  
4 digit ASCII number in mm (0000 ... 9999)

**Get password memory card**

SOH	F	C	K	D	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set password printing manually**

SOH	F	C	K	D	D	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = input of password  
4 digit ASCII number in mm (0000 ... 9999)

**Get printing manually**

SOH	F	C	K	D	D	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## 9.11 Compact Flash Card

### Save a label onto Compact Flash card

SOH	F	M	A	O	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

- O: In case a label with the entered name exists already then the label is overwritten without an enquiry. If you enter another value as 0, an enquiry appears demanding if you want to overwrite.  
 P: File name of the label which is to save. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

### Load a file from Compact Flash card

SOH	F	M	B	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

- P: File name of the layout which is to load. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

### Delete a layout from Compact Flash card

SOH	F	M	C	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

- P: File name of the layout which is to delete. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

### Format Compact Flash card

SOH	F	M	D	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

- P: Optional drive identification with colon (e.g. A:).  
 In case no drive is indicated, then the currently selected is formatted.

### Readout contents of CF card

SOH	F	M	G	O	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

- O: In case O is indicated, no error messages are displayed at the printing display e.g. if no card is inserted.  
 P: Optional drive identification with colon (e.g. A:).  
 In case no drive is indicated, then the currently selected is read out.

### Answer

SOH	File name/directory name							ETB
-----	--------------------------	--	--	--	--	--	--	-----

A list of all file entries is indicated, each entry is included in (SOH) and (ETB).

**Readout free memory space**

SOH	F	M	H	O	-	-	w	X	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

O: In case O is indicated, no error messages are displayed at the printing display e.g. if no card is inserted.

X = Drive [A,B] (optional)

**Answer**

SOH	A	X	n	n	n	n	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

X = Drive [A,B]

n = Memory space in KB

**Create directory**

SOH	F	M	I	O	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

O: In case a label with the entered name already exists, then it is overwritten without an enquiry.

If you enter another value as O, an enquiry appears demanding if you want to overwrite.

P = Drive and path indication

**Delete directory**

SOH	F	M	J	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive and path indication

**NOTICE!**

The current directory cannot be deleted.

**Delete directory path**

SOH	F	M	J	A	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

Deletes the indicated directory including all containing sub-directories and files.

**Change standard directory**

SOH	F	M	K	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive and path indication

**Readout current directory**

SOH	F	M	K	-	-	-	w	ETB
-----	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	P	ETB
-----	---	---	-----

P = Current directory

**Set standard directory for file selection via I/O**

SOH	F	M	K	B	-	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N = directory path

**Get standard directory for file selection via I/O**

SOH	F	M	K	B	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Antwort**

SOH	A	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Transfer file from printing system**

SOH	F	M	L	-	-	-	w	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P: File name of file which is to transfer. Drive name and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

**Answer**

SOH	A	F	*	S	ETB	Data
-----	---	---	---	---	-----	------

F = File name

S = File size in Byte

Data = Binary data

**Enquiry if the file exists**

SOH	F	M	M	-	-	-	w	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P: File name of file which is to transfer. Drive name and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

**Answer**

SOH	A	X	P	ETB	Daten
-----	---	---	---	-----	-------

X: 0 = File does not exist

1 = File exists

P = File name

**Readout size of Compact Flash card**

SOH	F	M	P	O	-	-	w	X	ETB
-----	---	---	---	---	---	---	---	---	-----

O: In case O is indicated, no error messages are displayed at the printing display e.g. if no card is inserted.

X: Drive [A,B] (optional)

**Answer**

SOH	A	D	n	n	n	n	-	-	X	ETB
-----	---	---	---	---	---	---	---	---	---	-----

X = Drive [A,B]

n = Memory in KB

D = enquired drive

**Get drive status**

SOH	F	M	S	-	-	w	X	ETB
-----	---	---	---	---	---	---	---	-----

X - Drive [A,B]

**Answer**

SOH	A	X	S	ETB
-----	---	---	---	-----

X = Drive [A,B]

S = Status

0: no storage medium

1: not formatted

2: ready

3: not determinable

## 9.12 Printing

### Set number of lines (n digits)

**SOH | F | B | A | A | - - r | N | ETB**

N = number of lines in ASCII (1, 10, 100, ...)

### Get number of lines

**SOH | F | B | A | A | - - w | p | p | p | p | p | p | p | p | p | p | ETB**

### Answer

**SOH | A | N | - - - - - - - - - | p | p | p | p | p | p | p | p | p | ETB**

### Start/Stop Command

In addition to the actual start/stop command, the print order can also be interrupted via the parameter/remote record.

**SOH | F | D | - - - - r | N | - - - - - - - | ETB**

N: 0 = stop printing

N: 1 = continue printing

N: 2 = cancel print order if it is already stopped

### Reset error

#### Reset error

**SOH | F | C | M | H | - - r | N | N | N | N | - - - - | ETB**

NNNN = current error ID or '9999'

#### Get error

**SOH | F | C | M | H | - - w | p | p | p | p | p | p | p | p | p | ETB**

### Answer

**SOH | A | N | N | N | N | 0 | 0 | 0 | 0 | p | p | p | p | p | p | p | p | p | ETB**

### Get error ID and error text

**SOH | F | C | M | H | A | - w | p | p | p | p | p | p | p | p | p | ETB**

### Answer

**SOH | A | N | N | N | N | ; | error text | ; | p | p | p | p | p | p | p | p | p | ETB**

**Item number of print order**

By means of this command the Host computer can enquire following item numbers:

**Total number of current print order**

SOH	F	B	B	A	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Number of labels which are still to print**

SOH	F	B	B	B	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Number of already printed labels**

SOH	F	B	B	C	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

At the end of one of these commands the print module returns the corresponding number as ASCII value (4 res. 5 digits) in the answer set.

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

With this set it is also possible to transmit the item number of print order to the print module.

**Item number of print order**

SOH	F	B	B	A	-	-	r	N	N	N	N	N	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = 5 digits item number of order

### Start printing

```
SOH | F | B | C | - | - | r | S | - | - | - | - | ETB
```

This command starts the print order which is actually set in the print module. The current parameters such as print mode, speed, initialization etc. are used.

S = x: sorted (e.g. pages 1-5, then again 1-5 etc. are printed)  
S = 1: unsorted (page 1 is printed x times, then page 2 x times, etc.)

```
SOH | F | B | D | - | - | r | S | - | - | - | - | ETB
```

Start printing (see above) but without tear off offset.

```
SOH | F | B | E | - | - | r | n | n | n | n | n | n | n | n | ETB
```

With this command the printjob identifier which appears in "printing" res. "stopped" window is assigned to a print order. If only blanks are transmitted, then the printjob identifier is deleted and the display shows "noname".

### Initialization of page handling

```
SOH | F | B | F | - | - | r | ETB
```

### Selection of current page

```
SOH | F | B | G | - | - | r | P | ETB
```

P = current page number [1 ... 9]

### Select order of pages to be printed

```
SOH | F | B | H | - | - | r | P1 | P2 | P3 | ETB
```

P<sub>1</sub>; P<sub>2</sub>;...= pages to be printed

### Generation of page without print start

```
SOH | F | B | I | - | - | - | r | S | ETB
```

With this command the corresponding page is only generated, i.e. no print start signal is sent.

S = x: sorted (e.g. pages 1-5, then again 1-5 etc. are printed)  
S = 1: unsorted (page 1 is printed x times, then page 2 x times, etc.)

## Feed

### Parameter set to release a feed

SOH	F	E	-	-	-	r	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## Test print

### Parameter set to release a test print

SOH	F	F	-	-	-	r	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## Status print

### Parameter set to print a status print

SOH	F	C	M	Q	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = printer settings

N: 1 = bar codes

N: 2 = fonts

## Cancel print orders

### Parameter set to cancel all active print orders

SOH	F	G	A	-	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: - = Cancel active print orders and delete all label data

N: 1 = Cancel active print orders and receive new label data

With the execution of this command:

- possible upcoming errors are confirmed
- possible upcoming customized entries are cancelled

## 9.13 Emulation

### Set emulation

SOH	F	Z	-	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = CVPL (Carl Valentin Programming Language)

N: 1 = ZPL II® (Zebra Programming Language)

### Get emulation

SOH	F	Z	-	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

### Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

## 10 Parameter Sets for Options

### 10.1 WLAN (Wireless Local Area Network)

#### Get connection status

SOH	F	C	W	C	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	N	i	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = not connected

N: 1 = connected

#### Set DHCP support

SOH	F	C	W	D	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x: 0 = Off

x: 1 = On

#### Get DHCP support

SOH	F	C	W	D	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	x	i	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

#### Set encryption type

SOH	F	C	W	E	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x: 0 = Off

x: 1 = WEP64

x: 2 = WEP128

x: 3 = WPA

x: 4 = WPA2

#### Get encryption type

SOH	F	C	W	E	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Answer

SOH	A	x	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

#### Get MAC address

SOH	F	C	W	F	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

#### Anser

SOH	A	N	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

N: Character string

**Set Gateway address**

SOH	F	C	W	G	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x: Format X.X.X.X  
X: 0 ... 255

**Get Gateway address**

SOH	F	C	W	G	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	x	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

**Set IP address**

SOH	F	C	W	I	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x: Format X.X.X.X  
X: 0 ... 255

**Set IP address**

SOH	F	C	W	I	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	x	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

**Example****Set IP address****Set IP address (e.g. 192.168.1.21)**

SOH	F	C	W	I	-	-	r	192	.	168	.	1	.	21	ETB
-----	---	---	---	---	---	---	---	-----	---	-----	---	---	---	----	-----

x = 192.168.1.21

**Get IP address**

SOH	F	C	W	I	-	-	w	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	1	9	2	.	1	6	8	.	1	.	2	1	;	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set WPA/WPA2 key**

SOH	F	C	W	K	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x = Hex string, 64 characters or ASCII, max. 63 characters

**Answer**

SOH	A	x	;	ETB
-----	---	---	---	-----

**Set netmask**

SOH	F	C	W	M	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x: Format X.X.X.X  
X: 0 ... 255

**Get netmask**

SOH	F	C	W	M	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	x	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

**Get server port**

SOH	F	C	W	P	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	x	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

x: Port number 1 ... 65535

**Get anew configuration from WLAN module and transfer to the printer**

SOH	F	C	W	R	-	-	r	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

N: OK (WLAN module connected)  
N: Error (WLAN module not connected)

**Set SSID (Service Set Identifier)**

SOH	F	C	W	S	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x = Character string

**Get SSID identification**

SOH	F	C	W	S	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	x	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

**Set WEP64 key**

SOH	F	C	W	V	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x = Hex string, 10 characters

**Set WEP128 key**

SOH	F	C	W	W	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

x = Hex string, 26 characters

**Save settings and restart of WLAN module**

SOH	F	C	W	X	-	-	r	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	i	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	-----

N: OK (WLAN module connected)

N: Error (WLAN module not connected)

**Set high speed data connection**

SOH	F	C	W	H	-	-	r	x	ETB
-----	---	---	---	---	---	---	---	---	-----

This setting is specified at the printer and if an active connection to the WLAN module exists, in the WLAN module, too. Subsequently the printer is again started.

x: 0 = Normal speed (115200 baud, no handshake)

x: 1 = High speed (921600 baud (adjustable),  
RTS/CTS handshake)**Get high speed data connection**

SOH	F	C	W	H	-	-	w	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	x	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

**Set high speed baud rate**

SOH	F	C	W	B	-	-	r	b	ETB
-----	---	---	---	---	---	---	---	---	-----

This setting is specified at the printer and if an active connection to the WLAN module exists, in the WLAN module, too. Subsequently the printer is again started.

b = baud rate (115200, 230400, 460800, 921600)

**Get high speed baud rate**

SOH	F	C	W	B	-	-	w	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	b	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	-----

## 10.2 Label Applicator

### Set operating mode

```
SOH F C P A - - r N - - - - - - ETB
```

N = 0 – Off

N = 1 – Stamp on

N = 2 – Blow on

N = 3 – Roll on

### Get operating mode

```
SOH F C P A - - w p p p p p p p p ETB
```

### Answer

```
SOH A N - - - - - - - p p p p p p p p ETB
```

N = Current operating mode (see above)

### Set application mode

```
SOH F C P B - - r N - - - - - - ETB
```

N = 0 – Print-Apply

N = 1 – Apply-Print

### Get application mode

```
SOH F C P B - - w p p p p p p p p ETB
```

### Answer

```
SOH A N - - - - - - - p p p p p p p p ETB
```

N = Current application mode (see above)

### Set support delay On

```
SOH F C P C - - r N N N N - - - - ETB
```

NNNN = Delay time in ms [0 ... 2500]

### Get support delay On

```
SOH F C P C - - w p p p p p p p p ETB
```

### Answer

```
SOH A N N N N - - - - p p p p p p p p ETB
```

NNNN = Current support delay On (see above)

**Set support delay Off**

SOH	F	C	P	D	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Delay time in ms [0 ... 2500]

**Get support delay Off**

SOH	F	C	P	D	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Current support delay Off (see above)

**Set vacuum control**

SOH	F	C	P	E	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Off

N = 1 – On

**Get vacuum control**

SOH	F	C	P	E	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = current vacuum control (see above)

**Set blow time**

SOH	F	C	P	F	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Blow time in ms [0 ... 2500]

**Get blow time**

SOH	F	C	P	F	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = current blow time (see above)

**Set waiting position (blow on & apply print)**

SOH	F	C	P	G	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Up

N = 1 – Down

**Get waiting position (blow on & apply-print)**

SOH	F	C	P	G	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = current waiting position (see above)

**Set roll-on time**

SOH	F	C	P	H	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Roll-on time in ms [0 ... 5000]

**Get roll-on time**

SOH	F	C	P	H	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Current roll-on time (see above)

**Get applicator inputs**

SOH	F	C	P	I	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	N <sub>4</sub>	N <sub>5</sub>	-	-	-	p	p	p	p	p	p	ETB
-----	---	----------------	----------------	----------------	----------------	----------------	---	---	---	---	---	---	---	---	---	-----

N<sub>1</sub>N<sub>2</sub>N<sub>3</sub>N<sub>4</sub>N<sub>5</sub> = Current state of applicator input

N<sub>1</sub> = 1 - Pre-dispense key pressed

N<sub>2</sub> = 1 - Pad in final position up

N<sub>3</sub> = 1 - Pad in final position down

N<sub>4</sub> = 1 - Compressed air available

N<sub>5</sub> = 1 - Vacuum at pad available

**Set applicator outputs**

SOH	F	C	P	J	-	-	r	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	N <sub>4</sub>	N <sub>5</sub>	N <sub>6</sub>	N <sub>7</sub>	-	ETB
-----	---	---	---	---	---	---	---	----------------	----------------	----------------	----------------	----------------	----------------	----------------	---	-----

N<sub>1</sub> = 1 - Move pad downwards

N<sub>2</sub> = 1 - Move pad upwards

N<sub>3</sub> = 1 - not assigned

N<sub>4</sub> = 1 - not assigned

N<sub>5</sub> = 1 - Blowing air On

N<sub>6</sub> = 1 - Supporting air On

N<sub>7</sub> = 1 - Vacuum (pad) On

**Get applicator outputs**

SOH	F	C	P	J	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	N <sub>4</sub>	N <sub>5</sub>	N <sub>6</sub>	N <sub>7</sub>	-	p	p	p	p	p	p	p	ETB
-----	---	----------------	----------------	----------------	----------------	----------------	----------------	----------------	---	---	---	---	---	---	---	---	-----

N<sub>1</sub>N<sub>2</sub>N<sub>3</sub>N<sub>4</sub>N<sub>5</sub>N<sub>6</sub>N<sub>7</sub> = Current state of applicator outputs (see above)

**Set cleaning time**

SOH	F	C	P	K	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Cleaning time in ms [0 ... 2500]

**Get cleaning time**

SOH	F	C	P	K	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Current cleaning time (see above)

**Set timeout hub**

SOH	F	C	P	L	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Moving up and down of pad in ms [0 ... 5000]

**Get timeout hub**

SOH	F	C	P	L	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	P	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set pressure control**

SOH	F	C	P	M	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Off

N = 1 – On

**Get pressure control**

SOH	F	C	P	M	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = Current pressure control (see above)

**Set pressure time**

SOH	F	C	P	N	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Pressure time in ms [0 ... 5000]

**Get pressure time**

SOH	F	C	P	N	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Current pressure time

**Set vacuum delay On**

SOH	F	C	P	O	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Delay time in ms [0 ... 2500]

**Get vacuum delay On**

SOH	F	C	P	O	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set vacuum delay Off**

SOH	F	C	P	P	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Delay time in ms [0 ... 2500]

**Get vacuum delay Off**

SOH	F	C	P	P	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Current vacuum delay (see above)

**Set transverse axis**

SOH	F	C	P	R	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = On

**Get transverse axis**

SOH	F	C	P	R	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set application signal**

SOH	F	C	P	S	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off

N: 1 = Print position

N: 2 = Apply position

**Get application signal**

SOH	F	C	P	S	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Set delay lower end position**

SOH	F	C	P	U	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Delay time in ms [0 ... 1000]

**Get delay lower end position**

SOH	F	C	P	U	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

**Answer**

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Current delay time (see above)

## 11 Configuration & Status

### Save configuration permanent

In case you want to save the described settings permanent into the print module, then you have to transmit the following command to the print module.

SOH	F	X	-	-	-	r	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = save current parameter

N: 1 = set all parameters to default values

Then the print module performs a restart

### Read configuration

SOH	F	X	-	-	-	w	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	-----

The print module sends as answer all current settings as parameter sets.

### Status enquiry

Host computer can receive information about the print module by the serial interface.

The status enquiry has the following data format:

SOH	S	ETB
-----	---	-----

### Status return information

After receiving the status enquiry the print module sends the corresponding status return information.

### Data format of status enquiry

SOH	1. Byte	2. Byte	5.-1. digit	ETB
	8 7 6 5 4 3 2 1	8 7 6 5 4 3 2 1		

1. Byte	=	1. Status byte
		8. Bit = free
		7. Bit = always set
		6. Bit = free
		5. Bit = 1 = running print order 0 = no. of items (0 = no print order)
		4. Bit = 1 = press stop key 0 = not pressed stop key
		3. Bit = cutter error (0 = no error; 1 = error)
		2. Bit = label material (0 = no error; 1 = error)
2. Byte	=	1. Bit transfer ribbon (0 = no error; 1 = error)
2. Byte	=	2. Status byte
		8. - 4. Bit = free
		3. Bit = Compact Flash card
		2. Bit = Mask set
		1. Bit = Printhead temperature
5.-1. digit	=	number of pieces with 5 digits as ASCII characters min. '00000' / max. '65535'

## 11.1 Autostatus

The print modules are equipped with an auto status function, i.e. in certain operating modes the print module actively sends the corresponding status. This can be enquired by the serial interface.

To activate the auto status, the host computer has to send the following command to the print module:

SOH	G	1. Byte	2. Byte	ETB
-----	---	---------	---------	-----

Each of the below indicated message which is observed and send by the print module has to be transmitted with a set Bit (see table below 1. Byte and 2. Byte) to the print module by means of auto state function. The print module sends after each performed condition the corresponding message (answer) to the host computer.

The following messages are provided:

**1 Start of generation**

**2 End of generation**

The print module sends this state in case data for a complete label was generated. The test print was not taken into consideration.

For counters/date variables the print module sends for each label a status cycle (start, end).

**3 Start of printing**

**4 End of printing**

The start of the print is send in case the generated data is send.

The end of the print is send in case the print of the label is finished and the motor has stopped.

**5 Start of cutting**

**6 End of cutting**

This status describes the cutting. It can be checked for timeout and the end of the cut movement → error.

**7 Start of feeding**

**8 End of feeding**

This status is send in case an additional feeding (dispenser, cutter, tear off) is released.

**9 Start of a print order**

**10 End of print order**

This status signalizes the start and end of a complete print order (1...99999 labels). This status is active in all operating modes.

**11 Error**

This status message is send in case an error occurs.

**12 Printing stopped**

This message is send if the printing is stopped.

**13 Printing resumed**

This message is send if the printing is resumed.

The printer sends the auto status in the following format to the host computer:

SOH	G	1. Byte	2. Byte	ETB
-----	---	---------	---------	-----

### 1. Byte

- |                              |                        |
|------------------------------|------------------------|
| 8. Bit = start of generation | 4. Bit = start cutting |
| 7. Bit = end of generation   | 3. Bit = end of cut    |
| 6. Bit = start printing      | 2. Bit = start feeding |
| 5. Bit = end of print        | 1. Bit = always 0      |

### 2. Byte

- |                               |                           |
|-------------------------------|---------------------------|
| 8. Bit = end of label feed    | 4. Bit = free             |
| 7. Bit = start of print order | 3. Bit = printing stopped |
| 6. Bit = end of print order   | 2. Bit = printing resumed |
| 5. Bit = error                | 1. Bit = always 0         |

### NOTICE!

Bit 1 has to be in 1. Byte and 2. Byte always 0, otherwise the print module possibly could recognize SOH or ETB.

At the status message of the print module to the host computer always at least 1 Bit is set. However, it could occur that several Bits are set at the same time.

At the status demand of the host computer to the print module it is also possible that several Bits are set at the same time.

The auto status demand is saved in the print module, i.e. it is set to 0 after switching off/on. Therefore it is necessary to demand it anew after each time the print module is switched on.

### Example

The print module should observe the start of a print order. For this the host computer sends the following demand to the print module.

SOH	G	00000000	01000000	ETB
-----	---	----------	----------	-----

After the condition is fulfilled (= start of the print order) the print module sends the following message to the host computer:

SOH	G	00000000	01000000	ETB
-----	---	----------	----------	-----

With regard to the contents the answer corresponds always to the format set.

## 12 Monitored Printing

This protocol replaces the outdated Autostatus. In contrary to the Autostatus, this is not a binary protocol but a text-based protocol sending the commands as English clear text. The advantage is a very fast and simple error tracing and development. The disadvantage of a larger data volume plays nowadays a smaller role.

### 12.1 Short Introduction

In order to activate monitored printing:

(SOH)FHM---rSE(ETB)  
(SOH)FHA---r2(ETB)

### 12.2 Parameter Sets (Host – Printer)

Formatting: # - SOH \* - ETB

**Command:** Set monitoring mode.

**Syntax:** #FHM---rSE $PnnnCnFn^*$

**Example:** #FHM---rSP10E\*

**Description:** Activates the forwarding of certain events to the server.

The results are:

S - (start/stop): print start, print end, stop printing, continue printing, cancel printing.

E – (error): Error occurred, error confirmed.

C – (photocell): Activates the photocell test (n=1)/disable (n=0)

F – Activates the encoder profile (n=1)/disable (n=0)

P – (progress): Print progress, indicates the number of already printed labels. In standard case, the interval between two events is a label. If a number behind the flag is indicated, an event every  $nnn$  labels is released (see example). With column printing the event is released, as soon as the entered interval was reached or exceeded for the first time (example: 3 columns, interval 4, 20 labels in total. Event at label 6,9,12 and 18).

**Command:** Activate, disable the monitoring.

**Syntax:** #FHA---rn\*

**Example:** #FHA---r2\*

**Description:** activated, deactivates the monitoring (n=[0,2]);

,0' – enables the monitoring after completion of print order,

,1' – reserved

,2' – activates the monitoring for the current port.

### 12.3 Direct Enquiry

**Command:** Requests print status.

**Syntax:** #FHS---r\*

**Example:** #FHS---r\*

**Description:** Invites the client to send the current status.

**Command:** User command to the sender of print order.

**Syntax:** #FHU---r*Daten*\*

**Example:** #FHU---rSE\*

**Description:** Sends #*Data*\* to the sender of print order.  
Max 100 characters.

### 12.4 Answer Sets (Printer – Host)

**Event:** Print start

**Set:** #HSStart-*Pagename-Labelsrequested*\*

**Example:** #HSStart-NoName1-100\*

**Description:** Indicates the start of a print order, including page name and number of labels to be printed.

**Event:** Printing completed

**Set:** #HSDone-*Pagename-Labelsprinted*\*

**Example:** #HSDone-NoName1-100\*

**Description:** Indicates the completion of a print order including page name and number of printed labels.

**Event:** Printing stopped

**Set:** #HSHold-*Pagename-Labelsprinted*\*

**Example:** #HSHold-NoName1-10\*

**Description:** Indicates the stopping of print order including page name and number of printed labels. Occurs when the user stopped the print order and/or after occurrence of an error.

**Event:** Continue printing

**Set:** #HSContinue-*Pagename-Labelsprinted*\*

**Example:** #HSContinue-NoName1-55\*

**Description:** Indicates the continuation of print order including page name and number of printed labels. Occurs when the user restarts the print order.

**Event:** Cancel printing

**Set:** #HSAborted-*Pagename-Labelsprinted*\*

**Example:** #HSAborted-NoName1-57\*

**Description:** Indicates the cancelation of printing including page name and number of printed labels.

**Event:** Error  
**Set:** #HSError-*Pagename-Labelsprinted-ErrorID-Errormessage*\*  
**Example:** #HSError-NoName1-57-28-Messerfehler\*  
**Description:** Indicates the occurrence of an error including page name, number of printed labels, error ID and error text.

**Event:** Error confirmation at printer  
**Set:** #HSAck-*Pagename-Labelsprinted* \*  
**Example:** #HSAck-NoName1-57\*  
**Description:** Indicates the confirmation of an error including page name and number of printed labels.

**Event:** Print progress  
**Set:** #HSProgress-*Pagename-Labelsprinted* \*  
**Example:** #HSProgress-NoName1-60\*  
**Description:** Indicates the progress of print order including page name and number of printed labels. This event is also returned as answer to status enquiry, if the printer is printing.

**Event:** Photocell value  
**Set:** #HSPhotocell-DLS:xxx-RLS:xxx\*  
**Example:** #HSPhotocell-DLS:3.8-RLS:1.9\*  
**Description:** Returns the values of transmission and reflexion photocell. The verification takes place every 5 ms; only changes are sent.

**Event:** Encoder profile  
**Set:** # HSEnc-Dist:xxx-Speed:xxx\*  
**Example:** # HSEnc-Dist:120-Speed:202\*  
**Description:** Generates the profile of speed development of the packaging machine during a print order.

**Event:** Answer to status enquiry (#FHS---r\*)  
**Description:** The respective current print event is returned.

## 12.5 Sample Label

A simple label with monitoring of all parameters with output of the progress – all 10 labels could look as following:

```
FHM---rSP10E
//Ueberwachung einschalten
FHA---r2
// JOBNAME: "ETIKETT1"
FBE---rETIKETT1
// TYPE: Endlosetiketten
// HEIGHT: 20.00 mm
// GAPLENGTH: 2.00 mm
// COLUMNS: 1
// COLUMN DISTANCE: 100.00 mm
FCDA--r1-----
FCCL--r0002000-
FCCM--r00000---
FCCHA--r1-----
FCCHB--r999-----
// SPEED: 50 mm/s
FCAA--r050-----
// CONTRAST: 200%
FCAB--r200-----
// LABELCONTROL: 0
FCDE--r0-----
// RIBBONCONTROL: 1
// RIBBONSENS: 0
FCDB--r10-----
// MATERIAL: Typ 1
FCDNA--r0-----
FCDNB--r1-----
FCDNC--r00000---
// SCAN MODE: 0
// SCAN PORT: 0
// NO READ: 0
// FEED LABEL: 0
FCDM--r00000---
// MIRROR LABEL: Nein
FCDO--r0-----
// TEXT (1/100 mm)
AM[1]1407;6907;0;4;0;3;398;398;8
BM[1]Test
// SETLINENO: 1 lines
FBAA--r1
// SETCOPIES: 1
FBBA--r00050---
// PRINT
FBC---r-----
```

The server output, for example, looks as follows:

```
C:\temp>cvnservw -p9010
Testserv: waiting for connect
@ISStart-ETIKETT1-50$
@ISProgress-ETIKETT1-10$
@ISProgress-ETIKETT1-20$
@ISHold-ETIKETT1-27$
@ISContinue-ETIKETT1-27$
@ISProgress-ETIKETT1-30$
@ISError-ETIKETT1-31-35-Druckkopf offen$
@ISAck-ETIKETT1-31$
@ISHold-ETIKETT1-31$
@ISContinue-ETIKETT1-31$
@ISProgress-ETIKETT1-40$
@ISProgress-ETIKETT1-50$
@ISDone-ETIKETT1-50$
Testserv: waiting for connect
```

## 13 Font Examples

### 13.1 Bitmap Fonts (Not Proportional)

Font 01 (8 x 11) Verhältnis 3:3  
 Font 02 (12 x 17) Verhältnis 3:3  
 Font 03 (18 x 26) Verhältnis 2:2  
 Font 04 (40 x 56) Verhältnis 1:1  
 Font 05 (18 x 32 mit Unterlängen) Verhältnis 2:2  
 Font 07 (12 x 22 mit Unterlängen) Verhältnis 2:2

### 13.2 Bitmap Fonts (Proportional)

Font 21 (10 proportional) Verhältnis 3:3  
 Font 22 (18 proportional) Verhältnis 2:2  
 Font 23 (26 proportional) Verhältnis 2:2  
**Font 24 (56 proportional) Verhältnis 1:1**  
 Font 28 (40 proportional) Verhältnis 1:1  
 Font 29 (8 proportional) Verhältnis 5:5

### 13.3 Vector Fonts

Absender (Baskerville) <u>Gold, Petra (Swiss Light)</u> <small>Name, Vorname (Helvetica Bold)</small> <u>Goldstraße 456 (Swiss Light)</u> <small>Straße, Hausnummer (Helvetica Bold)</small> <u>23456 Golddorf (Swiss Light)</u> <small>PLZ, Ort (Helvetica Bold)</small>	Das ist ein Musteretikett für die Darstellung der Schriftarten (Monospace)
<i>Musterlieferung Bitte bestätigen Sie den Empfang. (Brush Script)</i>	Empfänger (Baskerville) <u>Mustermann, Max (Helvetica Roman)</u> <small>Name, Vorname (Helvetica Bold)</small> <u>Musterstraße 123 (Helvetica Roman)</u> <small>Straße, Hausnummer (Helvetica Bold)</small> <u>45678 Musterstadt (Helvetica Roman)</u> <small>PLZ, Ort (Helvetica Bold)</small>

## 14 Index

### #

*FBAA, number of lines.....	92
